

# Research on Organic and Hybrid Photovoltaics within the MATEOH-PV consortium

*Thomas HEISER*

*Institut d'Electronique du Solide et des Systèmes (InESS)*  
*CNRS, Strasbourg*  
*Université de Strasbourg*

# What is MATEOH-PV?

- Network on MAterials and TEchnologies for Organic and Hybrid PhotoVoltaics ([www.mateohpv.fr](http://www.mateohpv.fr))
- Created in 2009 and supported by the Region Alsace (PMNA)
- 14 research teams in chemistry, physics and semiconductor devices from Strasbourg, Mulhouse and Nancy
- Covered TOPIC: *from design and synthesis of functional materials to the development of organic and hybrid PV devices*

# Our Mission

- Foster the local Organic & Hybrid PV community
  - benefit from complementary expertises and common goal
- Organize workshops and conferences
  - 2d Workshop on OPV & DSSC: 24/09/2010
  - Conference on  $\pi$ -conjugated materials and nanostructures (MNPC), 03-07/10/2011 Obernai.
- Share research platform and specific equipments
- Trigger collaborations among network members

# Main activities

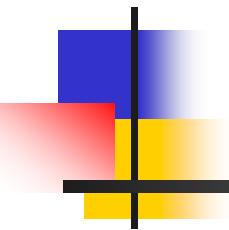

- Organic D/A bulk heterojunctions (BHJ)
- Hybrid D/A BHJ
- Dye-sensitized solar cells
- Solar batteries
- (Semi)conducting transparent oxydes

# Major expertises and facilities

- Chemistry of materials
  - Synthesis of conjugated polymers, molecular dyes, metallo-organic compounds, fullerenes, functionnalized CNT, organo-gelators, nanostructured ZnO, ionic liquids.
- Material characterization
  - Thin film nanostructure (cryo-TEM, electron diffraction AFM, XRD)
  - Optoelectronic properties (TOF, SCLC, OFET)
  - Charge carrier dynamics (transient absorption spectroscopy)
- Devices
  - Elaboration & characterization under controlled atmosphere
  - Device modelling

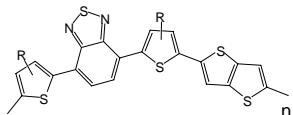

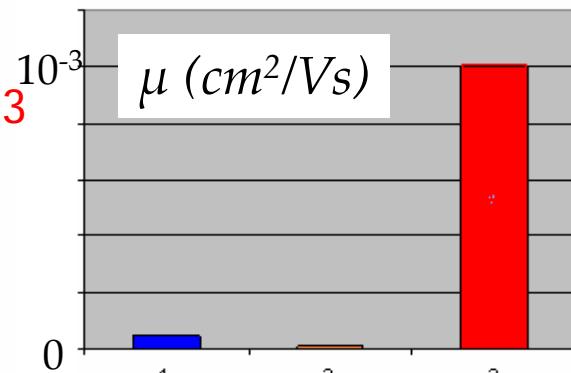

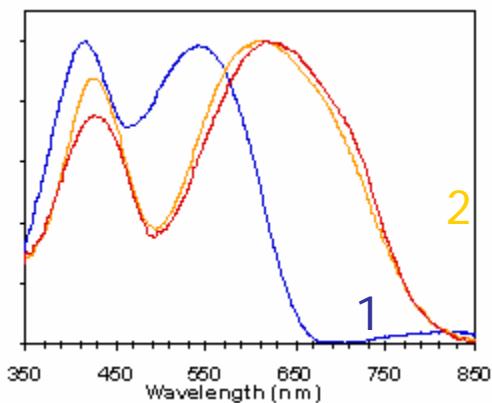

# Scientific highlights

# Scientific highlights

- Polymer/fullerene BHJ (*N. Leclerc, P. Lévêque, T. Heiser*)
  - D/A-alternate copolymers
    - GOAL: optimized HOMO/LUMO levels (absorption and  $V_{OC}$ ) and charge mobility

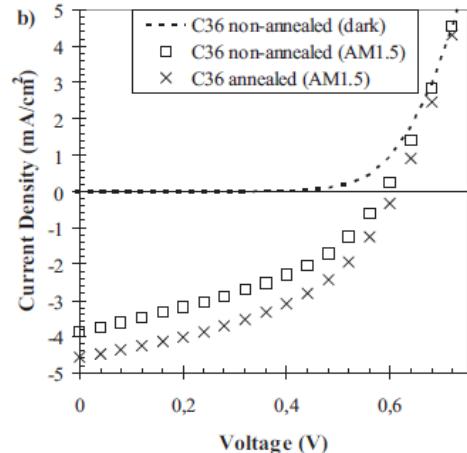

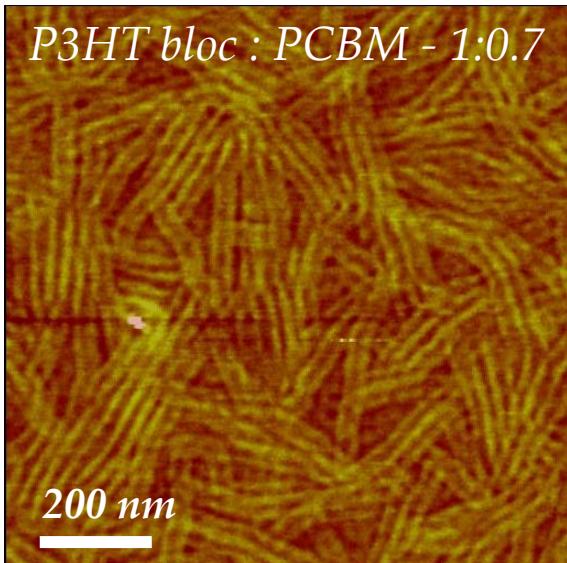

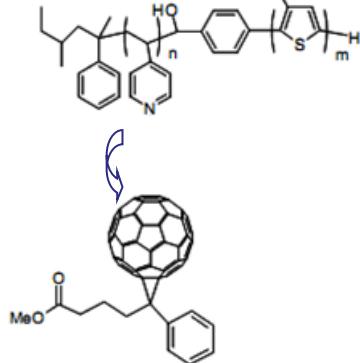

1, 2, 3 : same conjugated backbone, different side chains (position, nature)

*L. Biniek, et al. Macromol Rapid Com, 31 (2010) 651*

# Scientific highlights

- Polymer/fullerene BHJ (*N. Leclerc, P. Lévêque, T. Heiser*)
  - Block-copolymer based photovoltaic materials and devices
    - GOAL: optimized and stable BHJ morphology

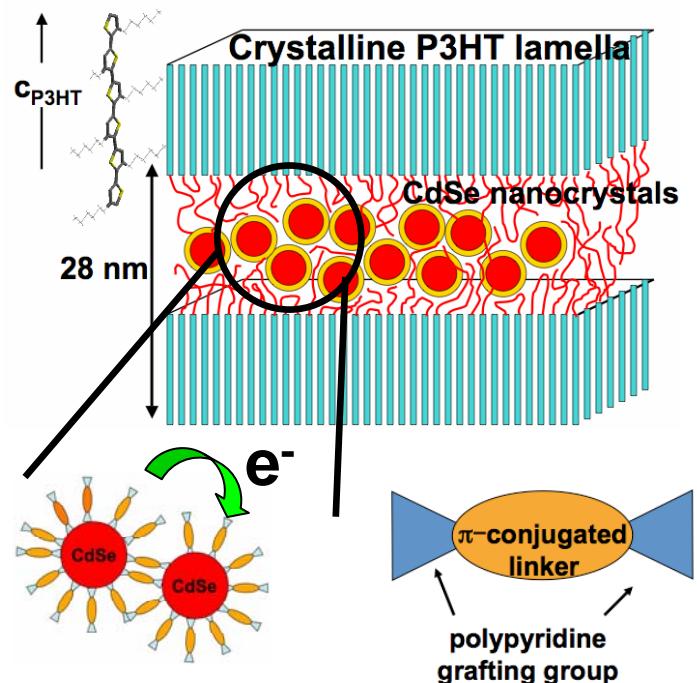

$$\eta = 1,6\%$$

[in coll.: R. Mezzenga (U. Fribourg, CH), S.Berson (CEA)]

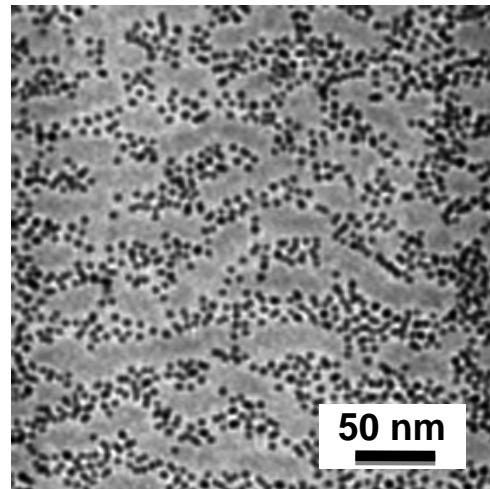

N. Sary et al. *Adv.Mat.*22 (2010) 763

# Scientific highlights

- Polymer/CdSe hybrid BHJ (*M. Brinkmann*)
  - Elaboration of hybrid materials for photovoltaics in thin films with controlled structure and morphology

*Nanostructured hybrid material  
(TEM bright field): P3HT+FePt nanospheres*

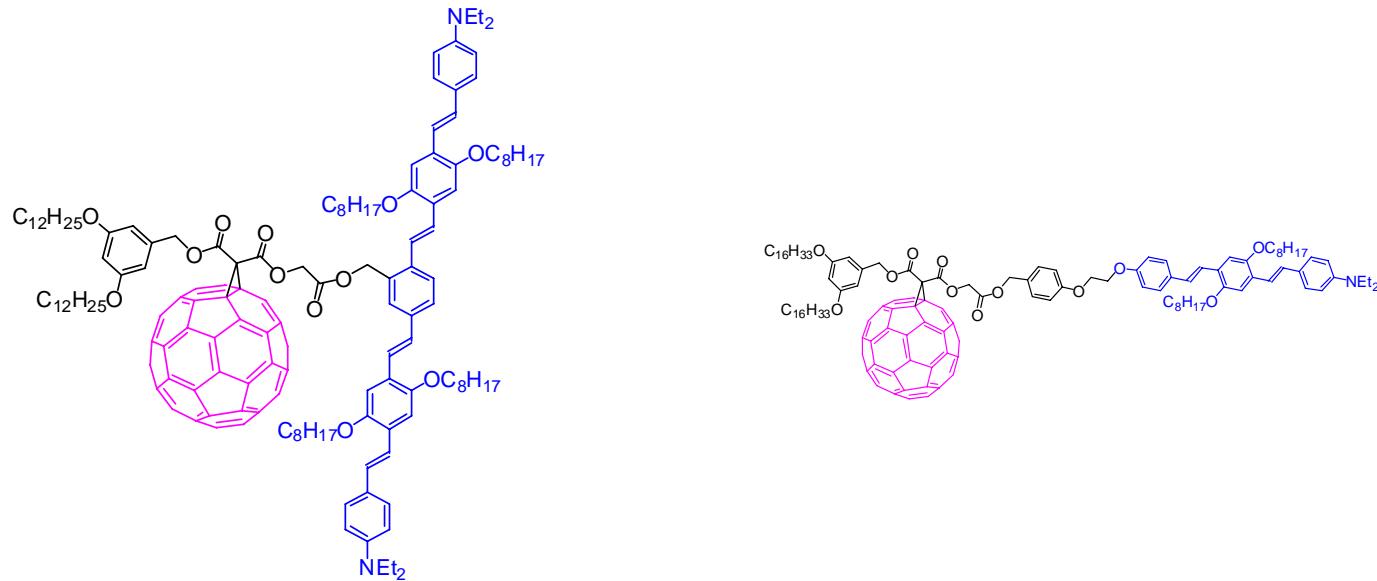

[in coll: CEA, PPSM (Cachan)]

Brinkmann M. *Adv. Mat.* 2006, 18, 860

# Scientific highlights

- Fullerene based D/A dyades (*J.F. Nierengarten*)  
GOAL: Investigate CT / ET versus molecular structure

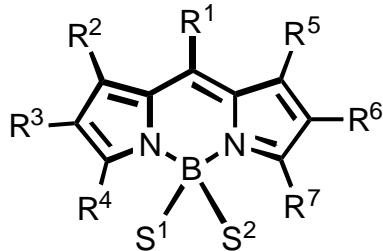

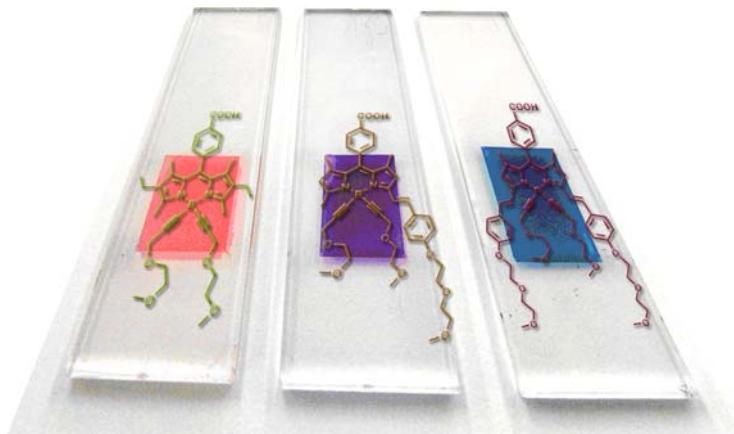

*Chem. Eur. J.* 2009, 15, 8825

*New J. Chem.* 2009, 33, 2174

# Scientific highlights

- Molecular donor for organic PV (*R. Ziessel, G. Ulrich*)
  - BODIPY dyes (large color range)
    - GOAL: better photon harvesting (multiple dyes)
- DSSC

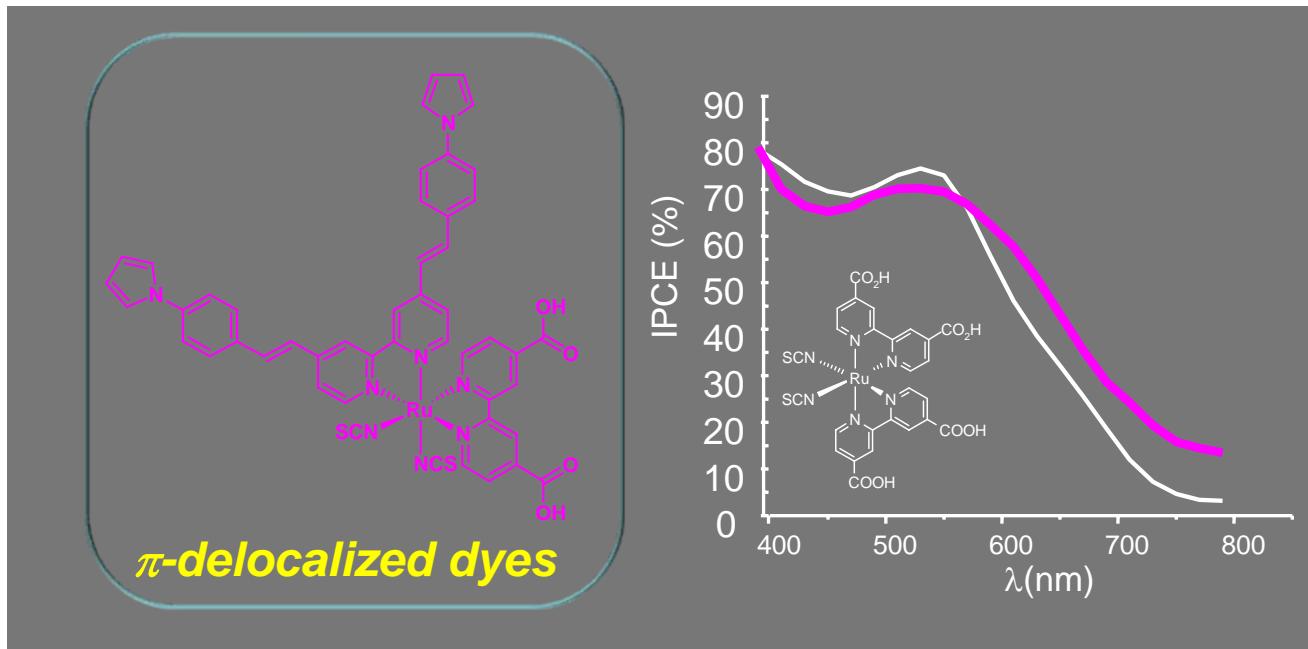

[in coll.: *J. Roncali (U. Angers)*], *R. Thummel (U. Houston)*

*T. Rousseau, & al. J. Mater. Chem., 2009, 19, 2298*  
*D. Kumaresan & al Chemistry Eur. J. 2009, 15, 6335*

# Scientific highlights

- DSSC (*P. Gros, M. Beley*)
  - GOAL: new dyes for slower recombination, wider absorption range, higher absorption coefficient

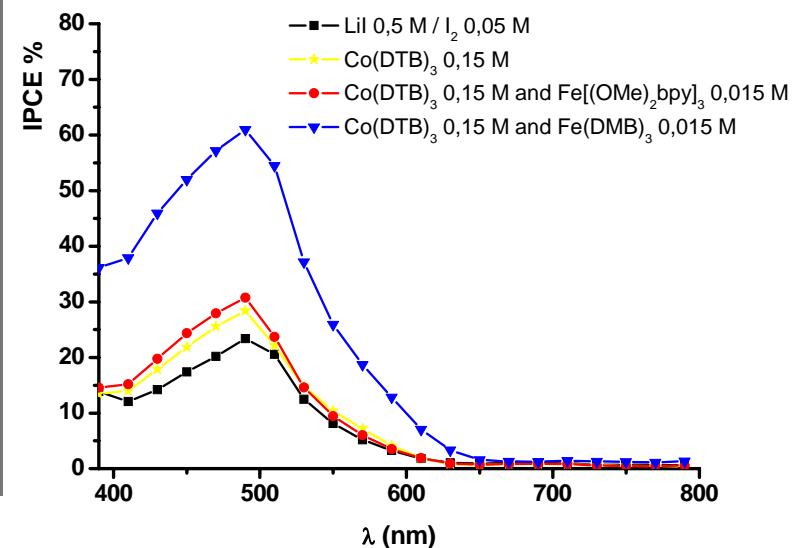

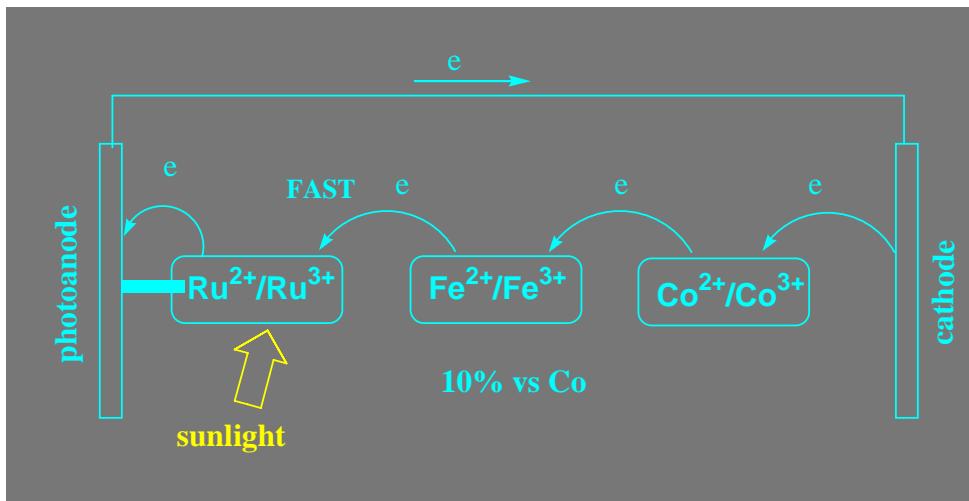

[in coll.: U. Ferrara]

Dalton Trans. 2009, 63

# Scientific highlights

- DSSC (*P. Gros, M. Beley*)
  - GOAL: New redox mediators – non corrosive, slower recombination, weak visible absorption, faster regeneration, modulation of electronic properties

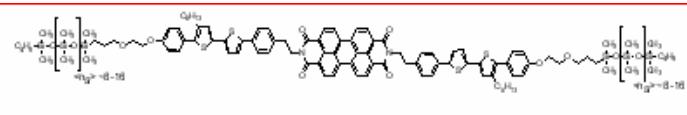

[in coll.: U. Ferrara]

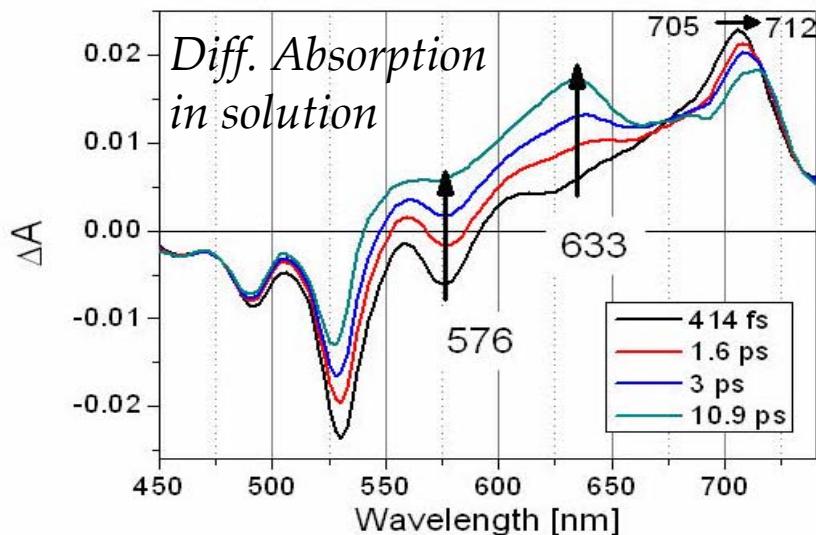

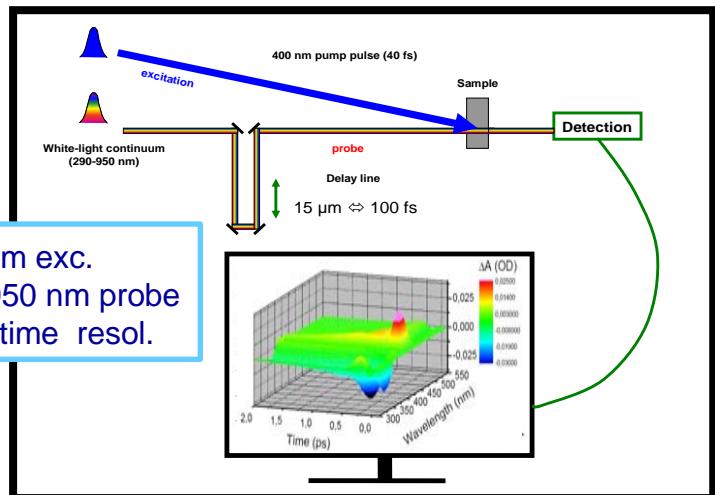

Chem. Eur. J. 2010, 2611

# Scientific highlights

- Ultrafast transient absorption spectroscopy on D-A-D oligomers  
(*S. Haacke, J. Léonard, S. Mery*)

- GOAL: Understand intramolecular charge transfer dynamics

# Mateoh-PV teams and expertises

- N. Leclerc (LIPHT)- Conjugated polymer synthesis
- R. Ziessel, G. Ullrich (LCOSA-ECPM) – Molecular dyes synthesis
- S. Mery (IPCMS) - Synthesis of nanostructured semiconducting DAD smectic liquid crystalline material
- P. Gros, M. Beley (SOR -U. Nancy) - Synthesis of dyes and redox mediators (DSSC)
- J.F. Nierengarten (LCMM-ECPM) – Synthesis of advanced fullerene materials
- P. Petitm F. Schosseler (ICS) – Synthesis of functional CNT
- A. Carton, G. Pourroy (IPCMS) – Synthesis of nanostructured ZnO layers
- A. Dinia (IPCMS) –TCO layers obtained by sputtering
- J.L. Rehspringer (RBnano) – TCO from wet processable metallorganic precursors
- R. Welter (I. Chimie - UdS) – Synthesis of Ferric metallorganic compounds for solar battery applications
- D. Ivanov (IS2M) – XRD, AFM investigations of organic materials
- B. Brinkmann (ICS) – TEM, AFM investigations and processing of conjugated polymers
- S. Haacke, J. Léonard (IPCMS) – Transient absorption spectroscopy
- T. Heiser, P. Lévêque (InESS) – FET and PV devices. Charge transport investigations
