# Our products

## Crystal Fibre

Specialty fibers  
and modules

## SuperK

Supercontinuum  
lasers

## Koheras

Industrial low  
noise DFB lasers

## Argos

High Power  
OPOs

# Overview

Industrial Usage

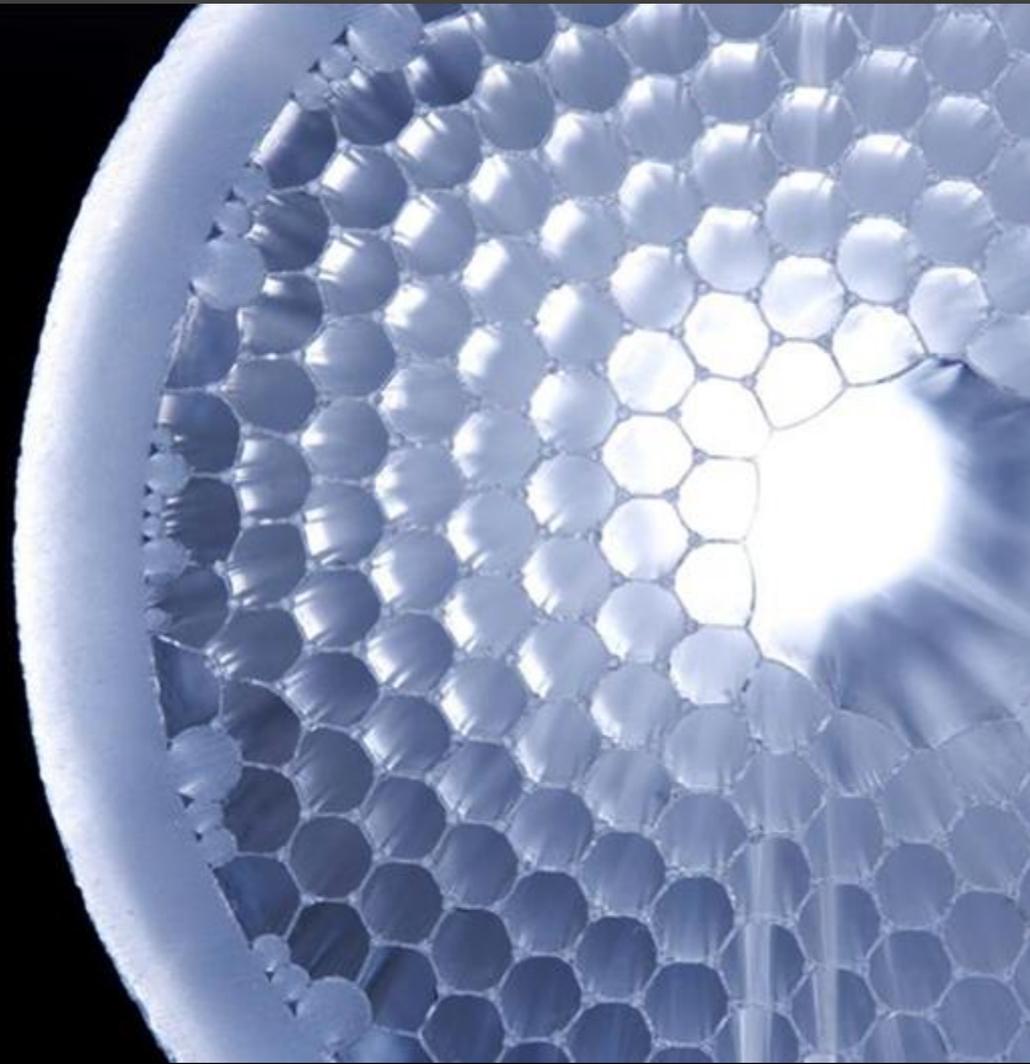

# Our platform: photonic crystal fibers

Gain modules & fibers

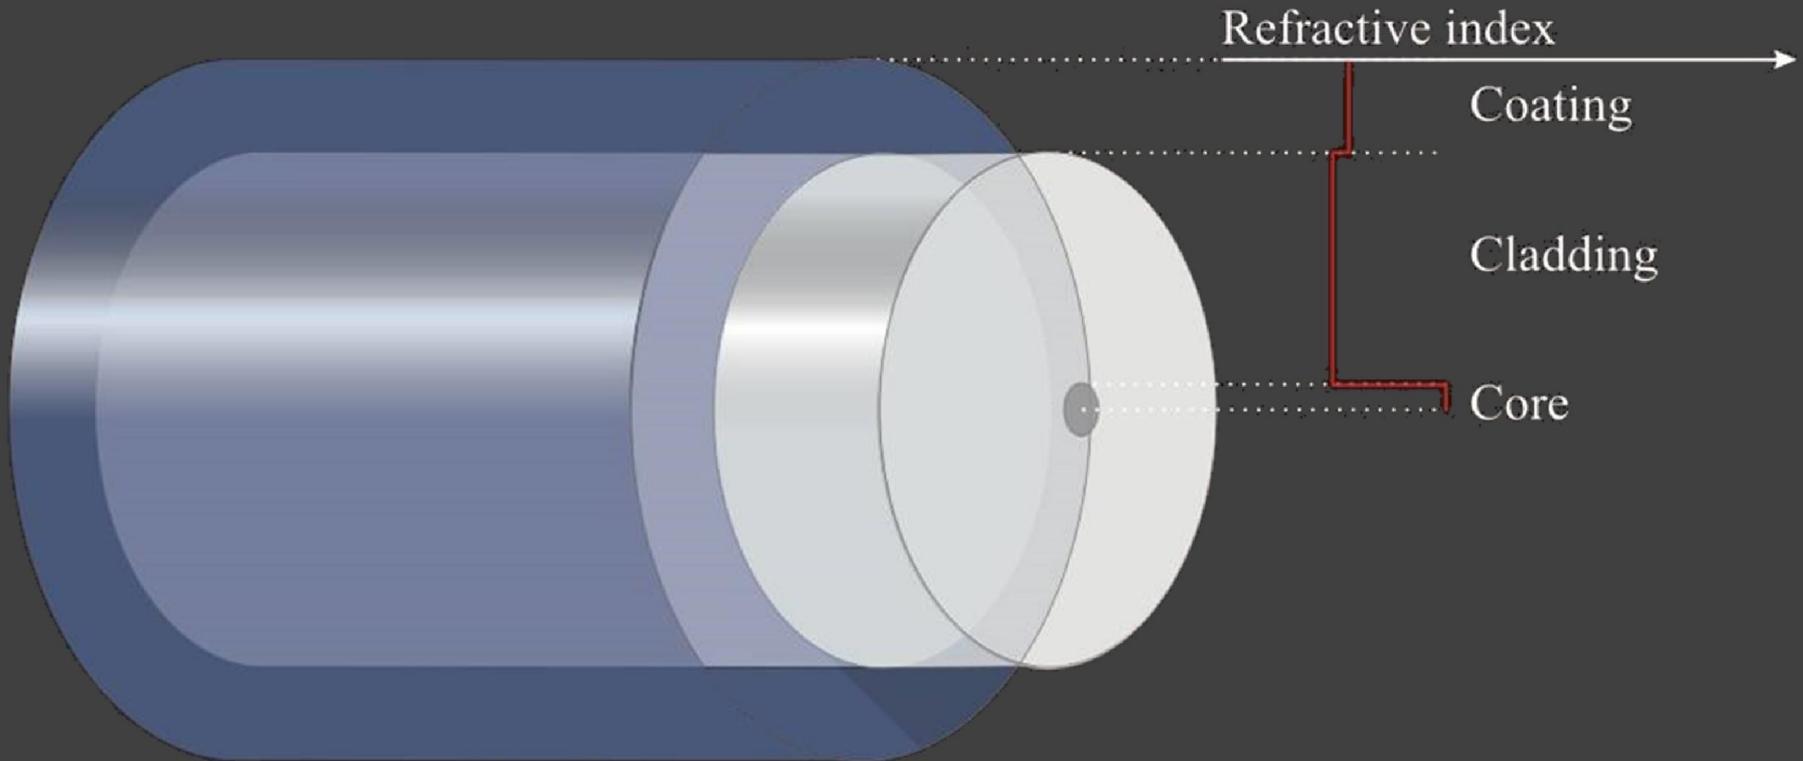

Nonlinear fibers

Fiber delivery systems

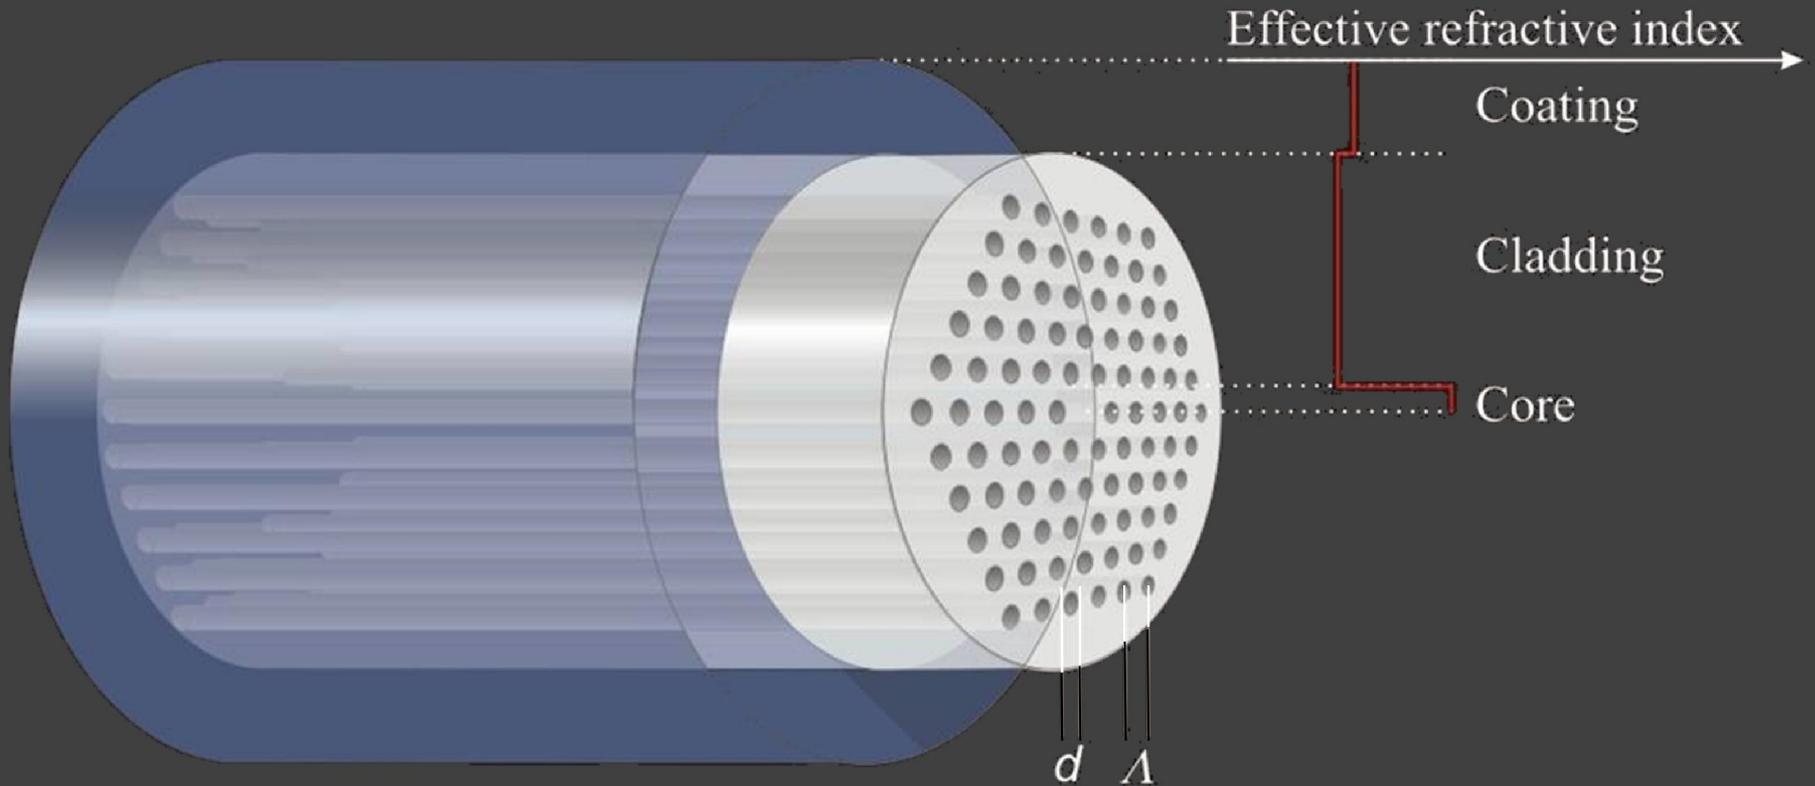

Hollow core PBG fibers

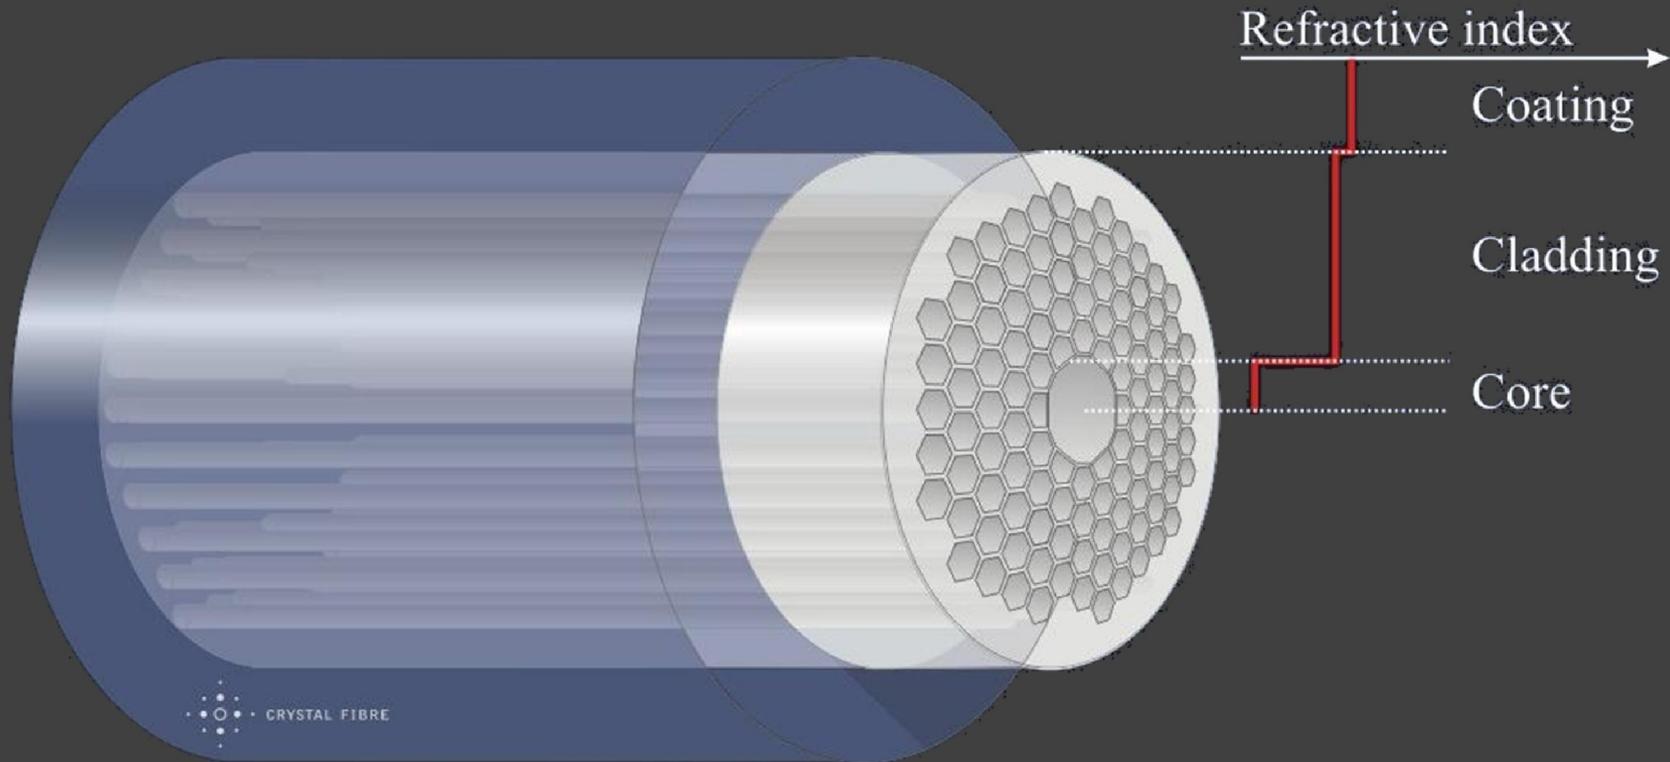

# Step index fiber

# Solid-core photonic crystal fiber

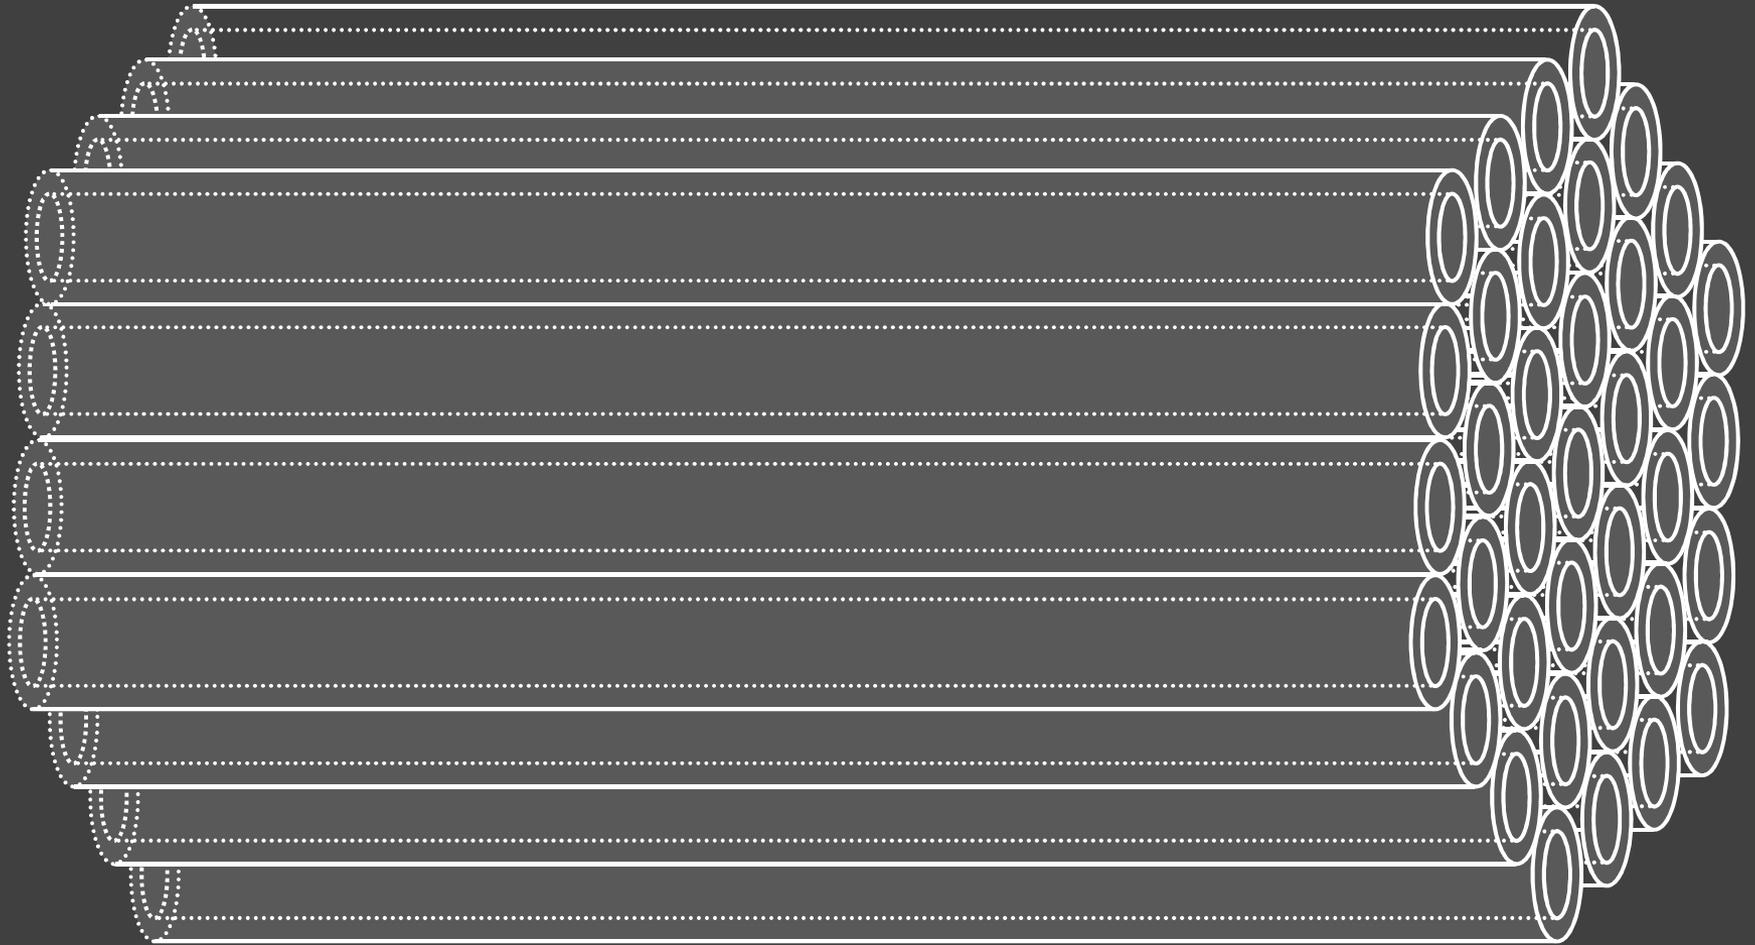

# Hollow-core photonic crystal fiber

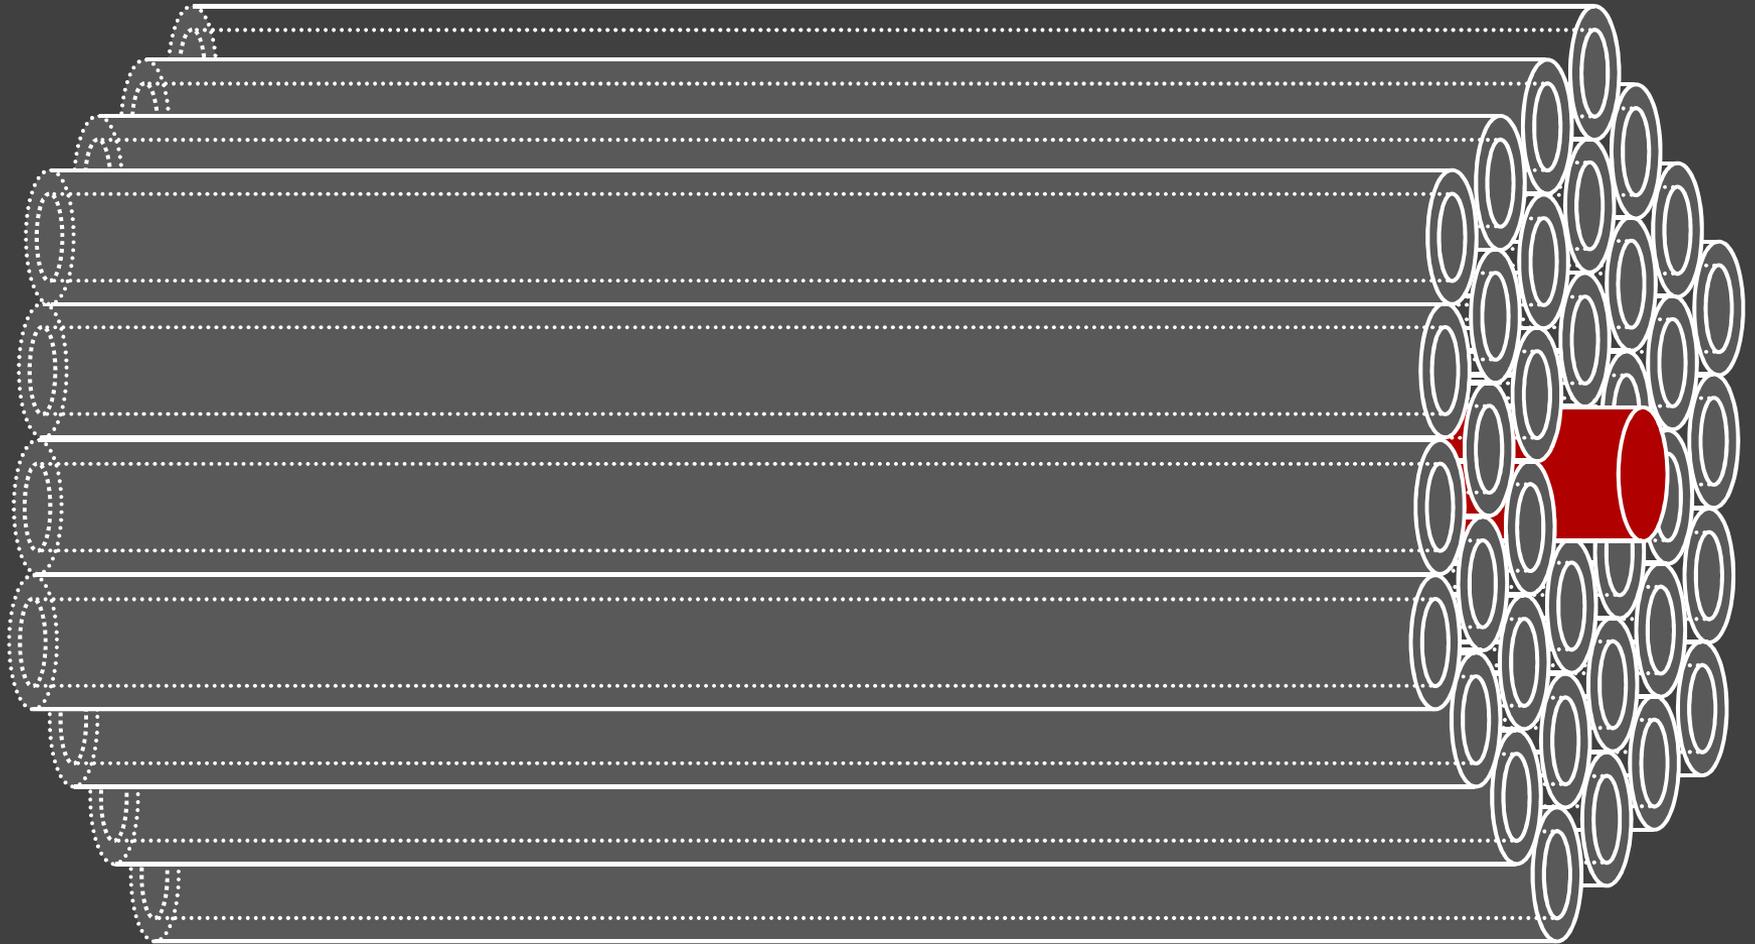

# How to make photonic crystal fibers

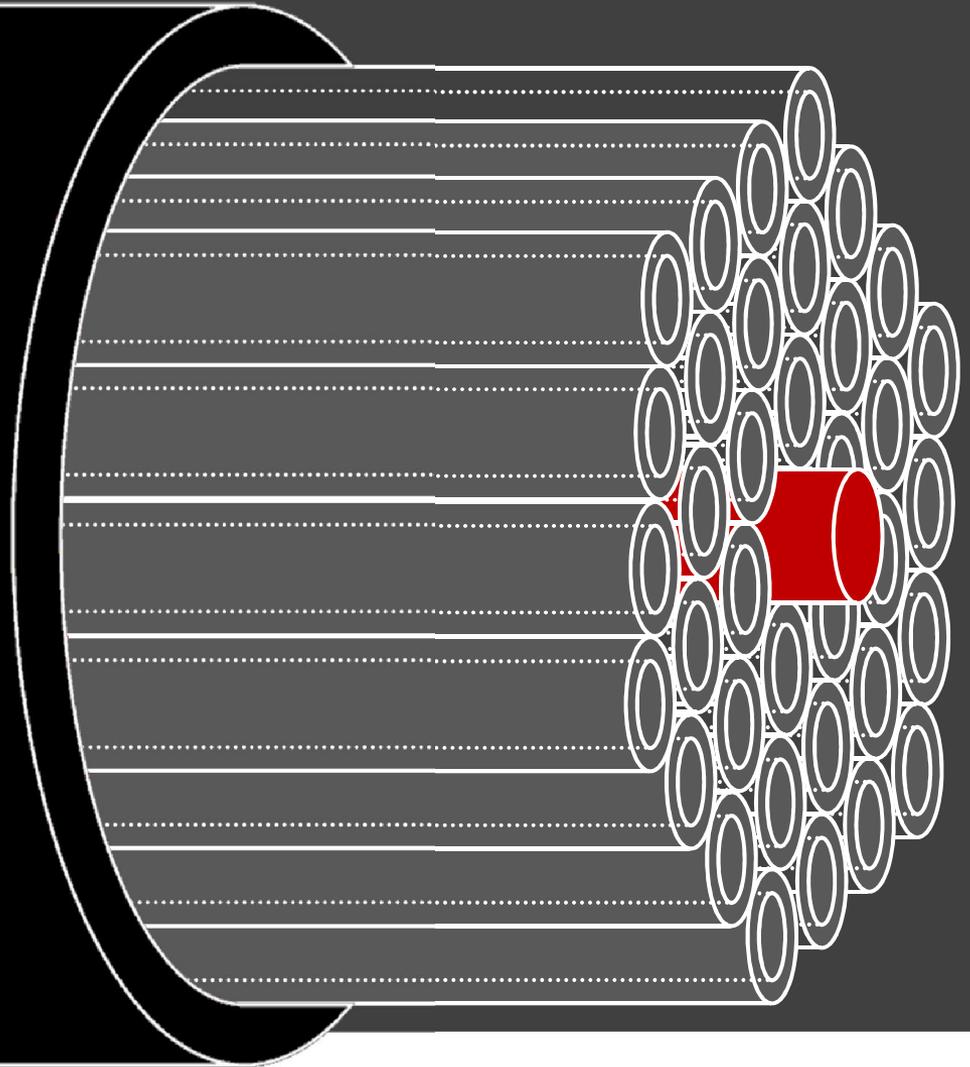

# How to make photonic crystal fibers

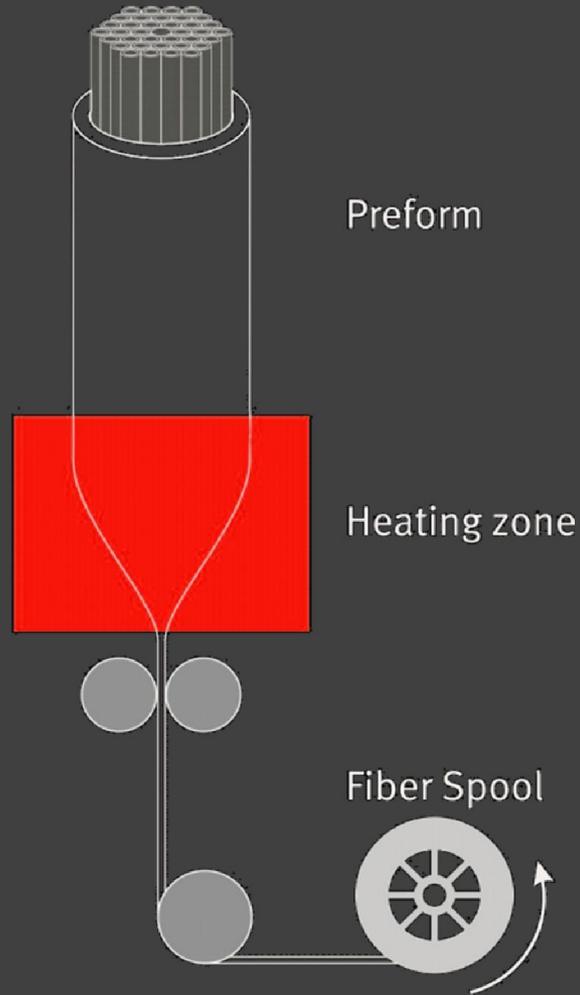

# How to make photonic crystal fibers

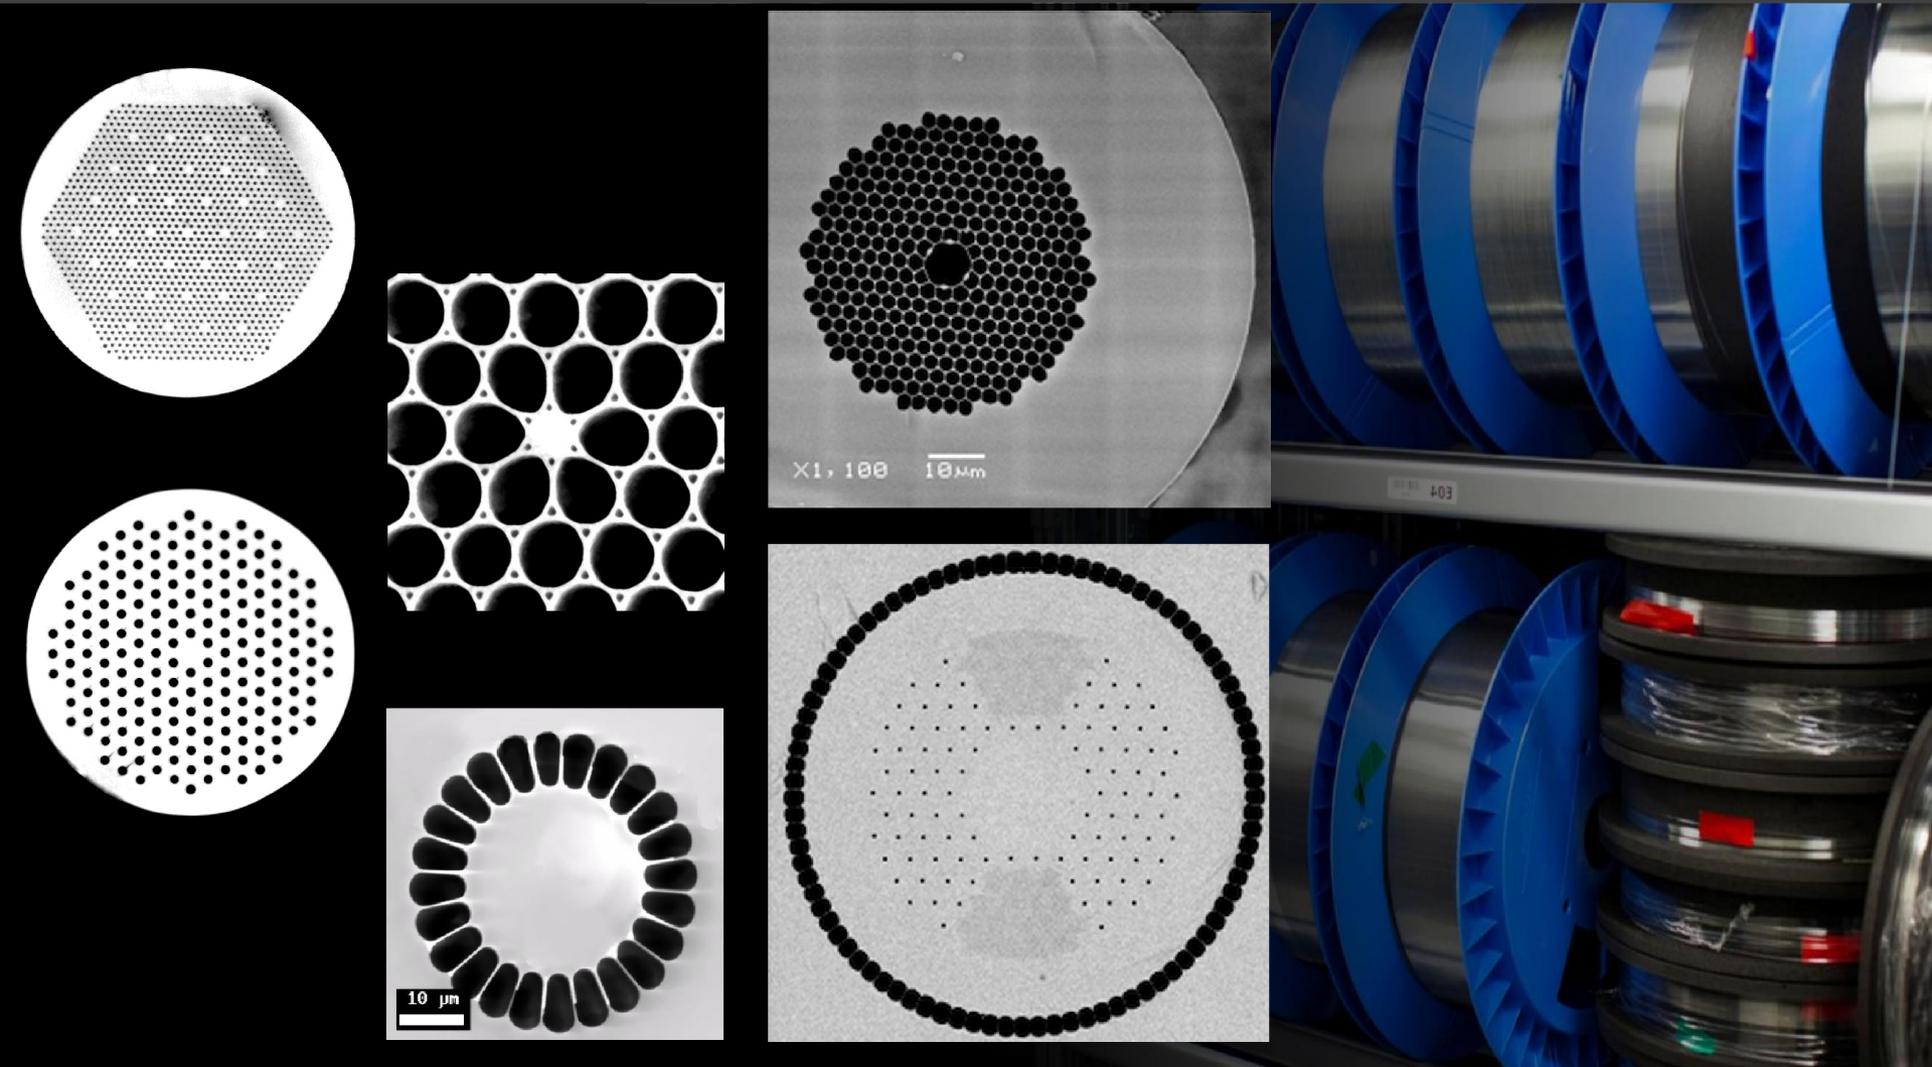

# How to make photonic crystal fibers

# How to make photonic crystal fibers

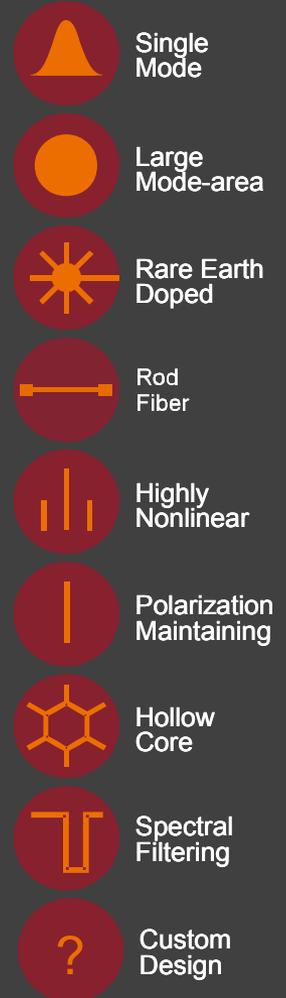

# Different fiber structures

# The NKT Photonics PCF line

- Single mode fibers
- Large mode area fibers
- Active fibers
- Rod fibers
- Highly nonlinear fibers
- Polarization maintaining fibers
- Hollow core fibers (photonic bandgap fibers)
- Fibers for spectral filtering
- Custom design

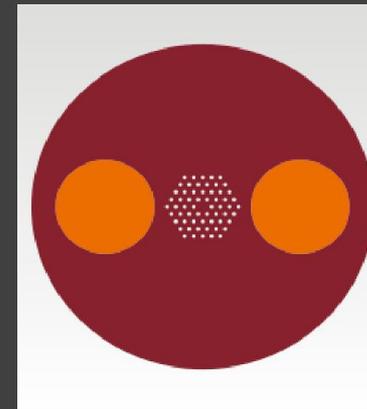

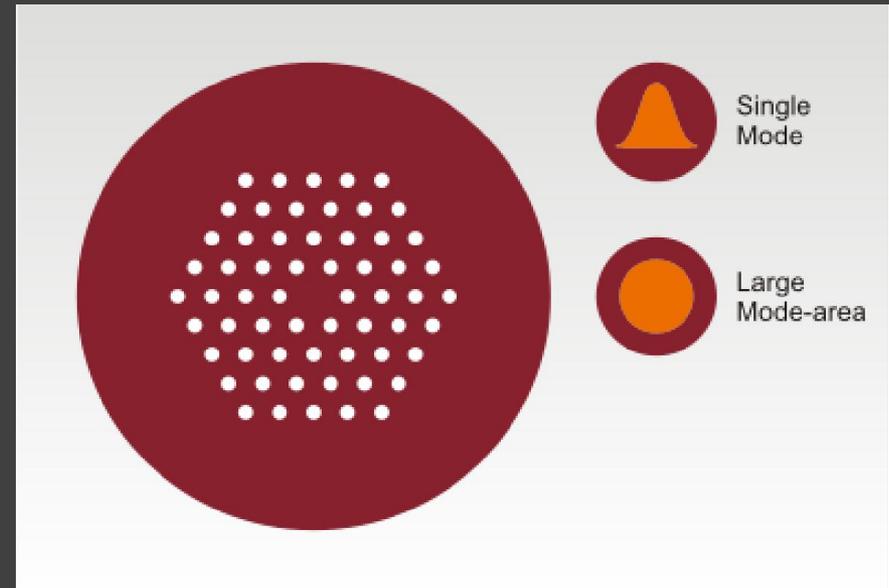

# LMA fibers

## Applications:

Delivery of single mode and high power light over a range of wavelengths

## Key Features and Benefits

- Endlessly single mode
- High power handling
- Low nonlinearities
- High beam quality
- Terminations and patch-cord options

LMA-PM

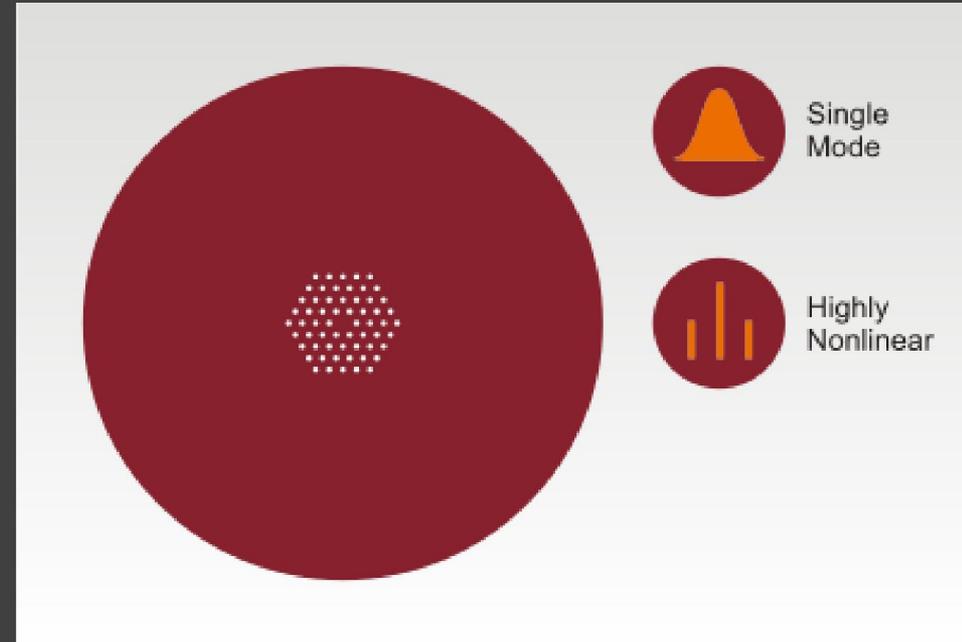

# Nonlinear fibers

## Applications:

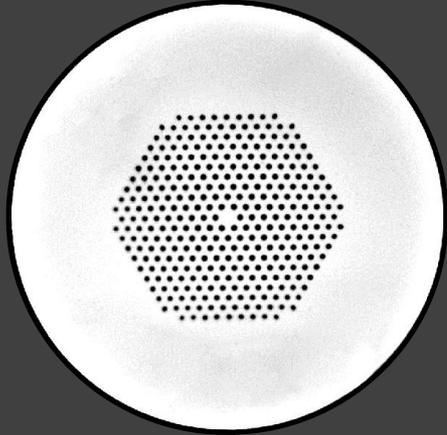

- Supercontinuum generation
- Frequency conversion
- Optical parametric amplification
- Four-wave mixing

## Key Features and Benefits

- High nonlinear coefficients
- Single mode
- Zero dispersion at various wavelengths

# Common pump wavelengths

Most fibers are optimized for pumping at major laser wavelengths

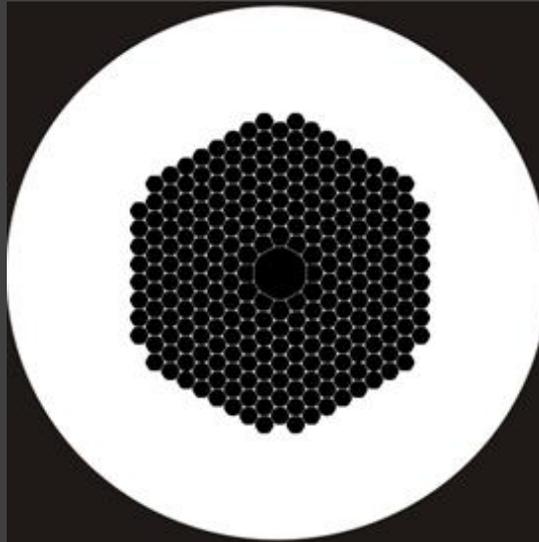

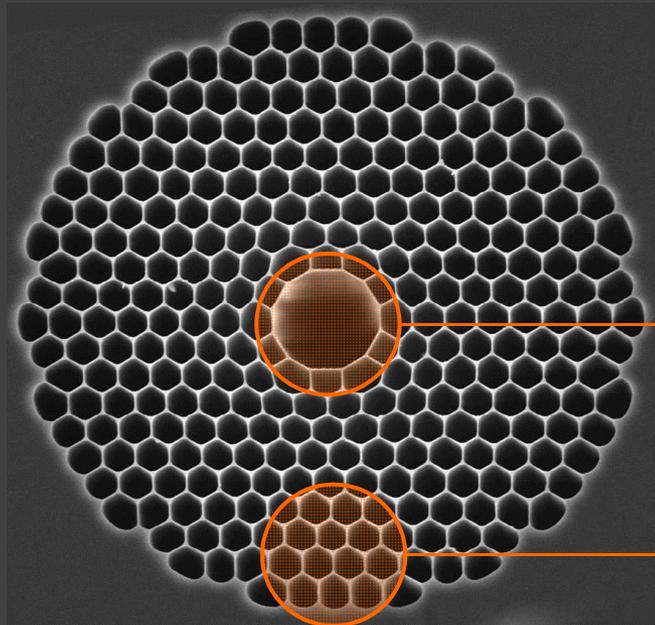

800 nm

1060 nm

1550 nm

# Hollow core fibers

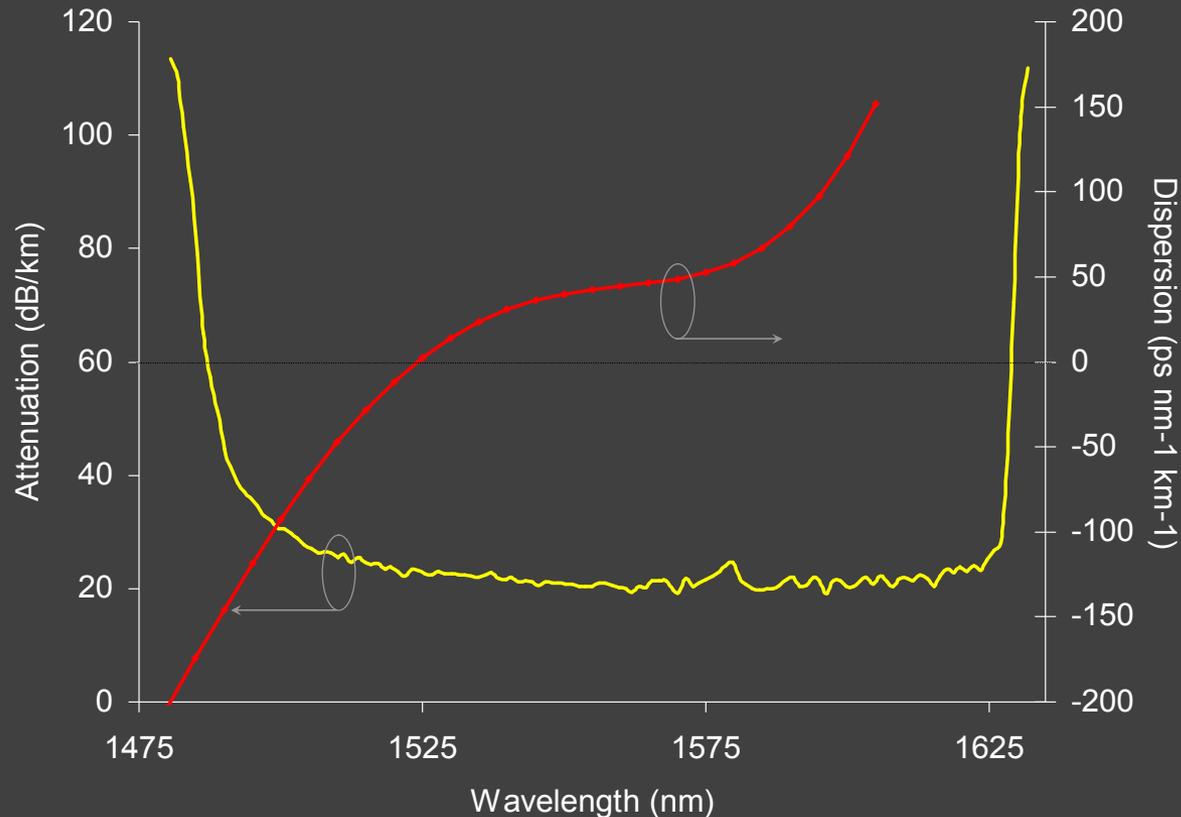

**Hollow core guides light**

⇒ Light matter interaction dramatically reduced

Propagation in the cladding is inhibited by photonic bandgap effect

# Photonic bandgap guidance

- Transmission band well-defined; like a notch filter.
- Dispersion follows similar trend for all fibers as shown in this example

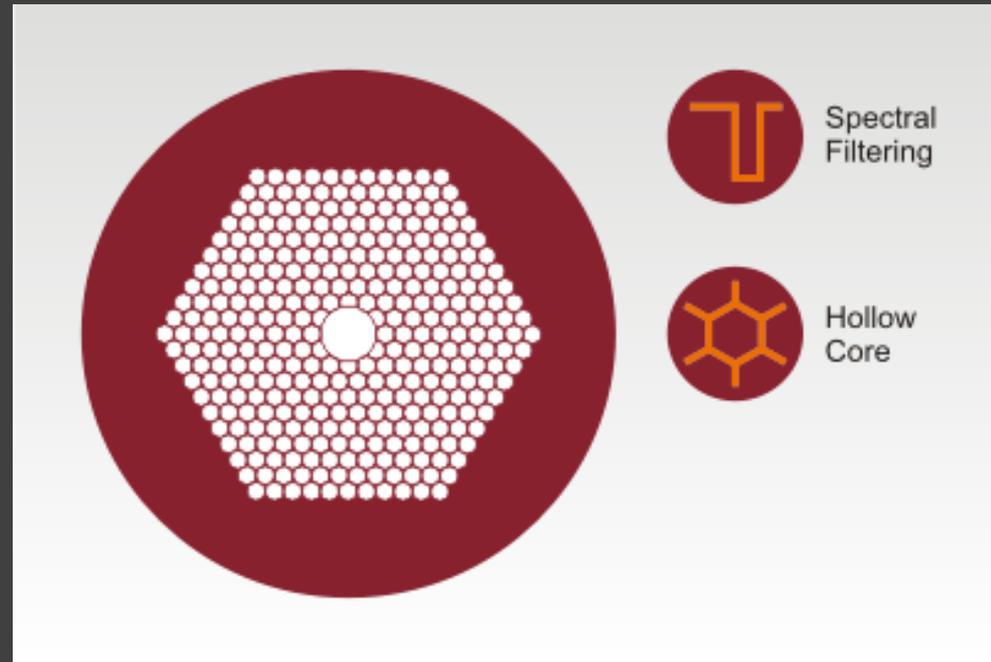

# Hollow core fibers

## Applications

- Pulse delivery
- Spectral filtering
- Sensors, gyroscopes

## Key Features and Benefits

- Reduced interaction with silica
- Low nonlinearity
- Insensitivity to bending, radiation, magnetic fields, and thermal fluctuations
- Unique dispersion properties
- Long interaction length with gases

# Hollow core fibers

## Visible wavelength fibers

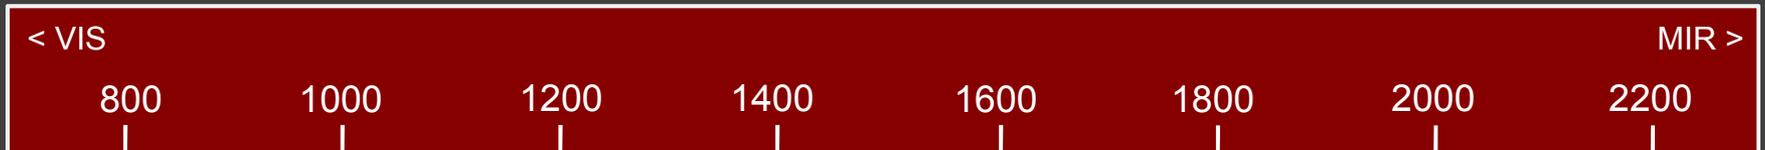

**HC-440-02**

**HC-532-02**

**HC-580-02**

**HC-633-02**

## Near Infrared fibers

**AIR-6-800**  
**HC-800-01**

**HC-1060-02**

**HC-1550-02**  
**HC-1550-04**  
**HC-1550-PM-01**  
**HC19-1550-01**

**HC-2000-01**

# Overview

Technology

Termination

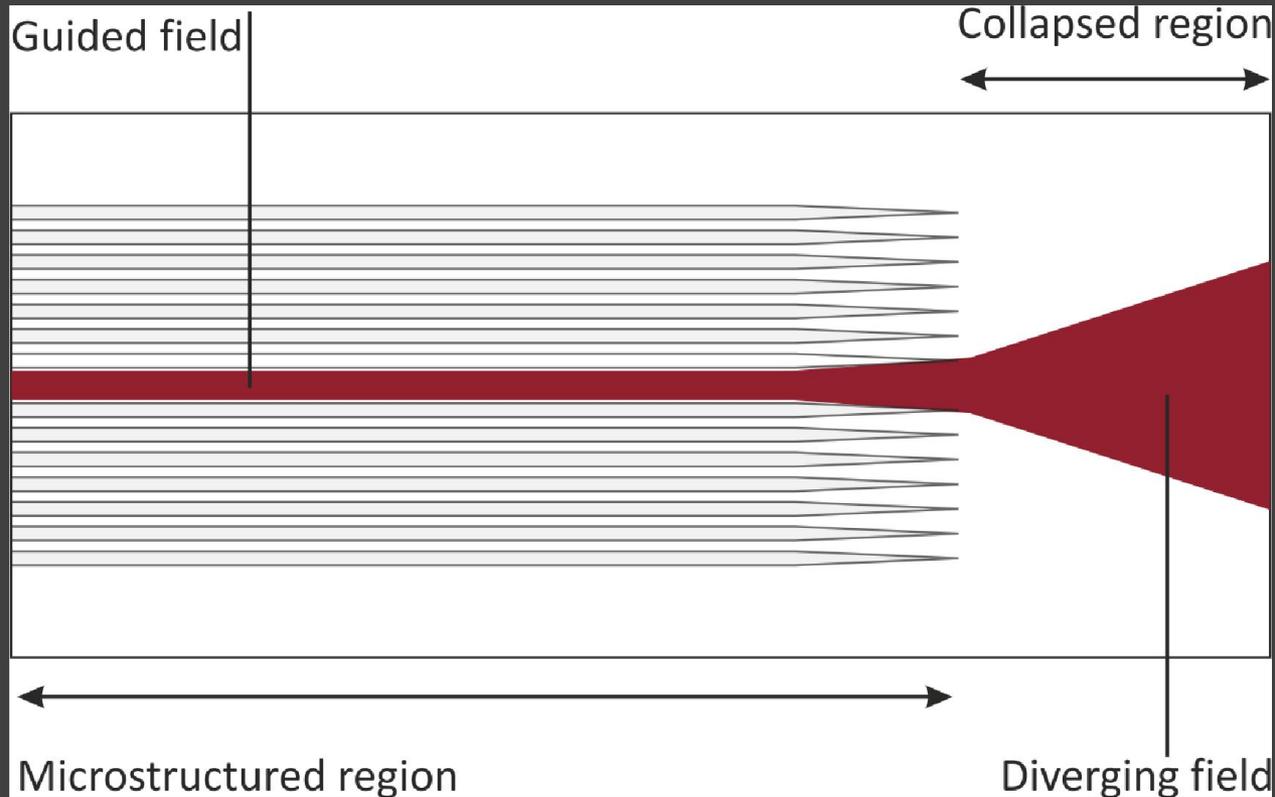

Industrial Usage

# Termination

- End seal and cleave / end caps
- Connectorization
  - FC/PC, FC/APC, PM
  - SMA-905
- Splicing to standard pigtails
- Tubing (up to 5 meters)
  - 3 mm PVC / 900 micron loose tube
  - Flexible steel tube
- Standard assemblies

# End-sealing (solid core fibers)

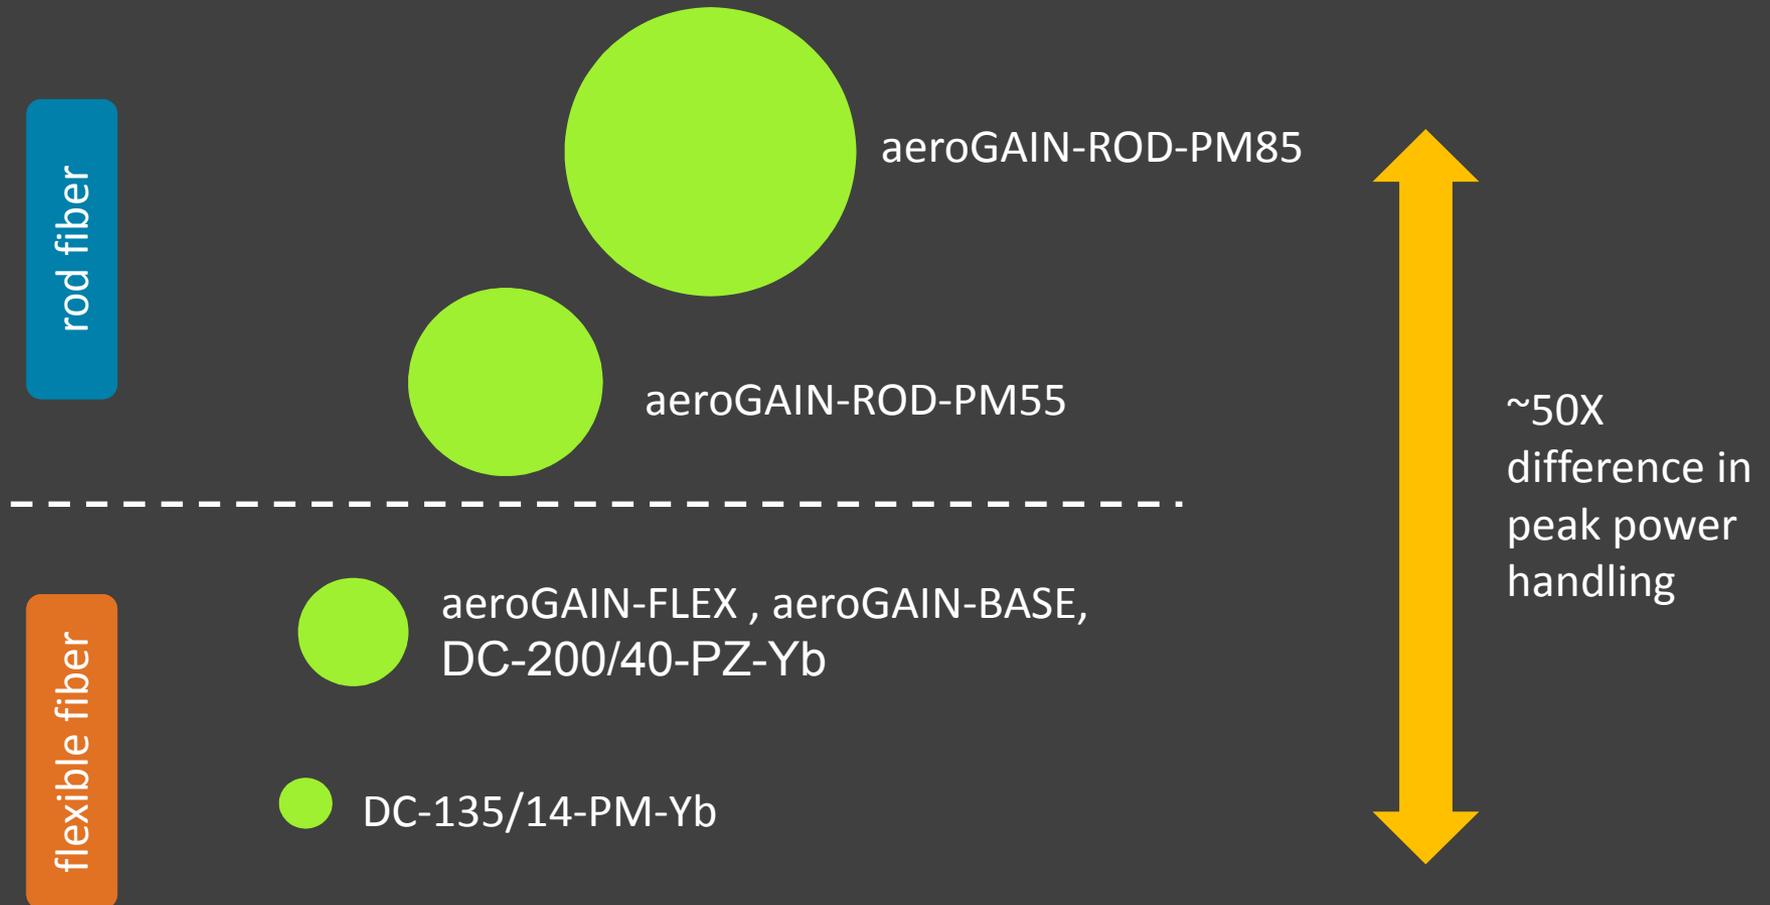

# Overview

Technology

Termination

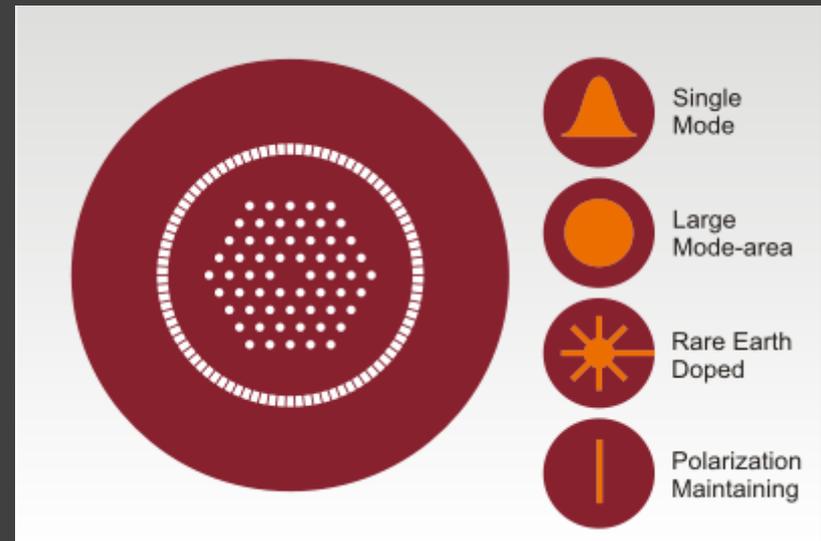

Industrial Usage

# Industrial usage: gain modules for lasers

# Industrial usage: gain modules for lasers

- Rods permit larger pulse energy and higher peak power
- Diffraction limited beam quality
- Large effective area
- Polarization-maintaining
- AR coated end-caps

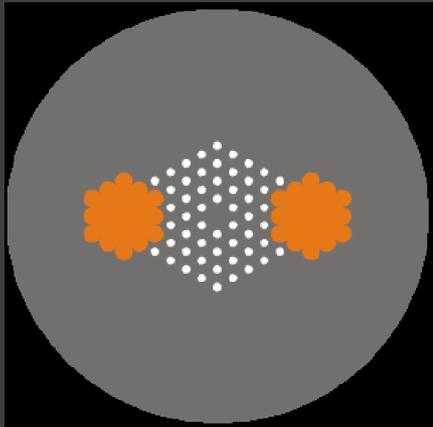

# Industrial usage: gain modules for lasers

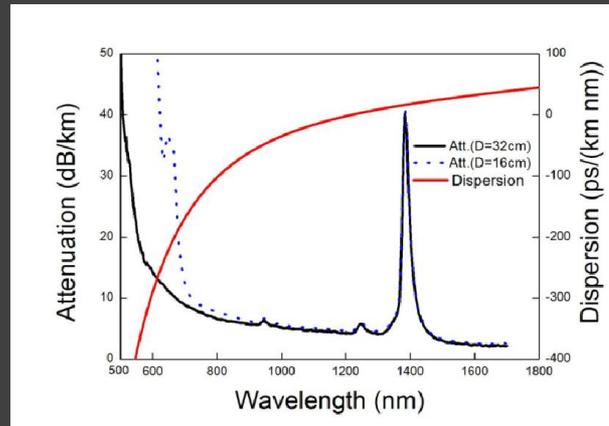

... and many more

# Industrial usage: fiber delivery

## aeroGUIDE-Power – broadband high power PM fiber delivery

Polarization  
maintaining

Attenuation < 10 dB/km  
Mode field diameter ~ 12.6  $\mu\text{m}$

SMA high power  
connector

# Hall of fame

1 ns, 4.3 mJ pulses with 4.5 MW peak power

3.8 GW peak femtosecond CPA system

4 kW single mode amplifier chain

167 W cw power at 1178nm

18 W cw at 532 nm (Verdi)

...

# Industrial usage: white light lasers

## Lamps

**Pro:** Cheap, compact, robust

**Con:** Brightness, lifetime

## Lasers

**Pro:** Bright, single-mode, lifetime

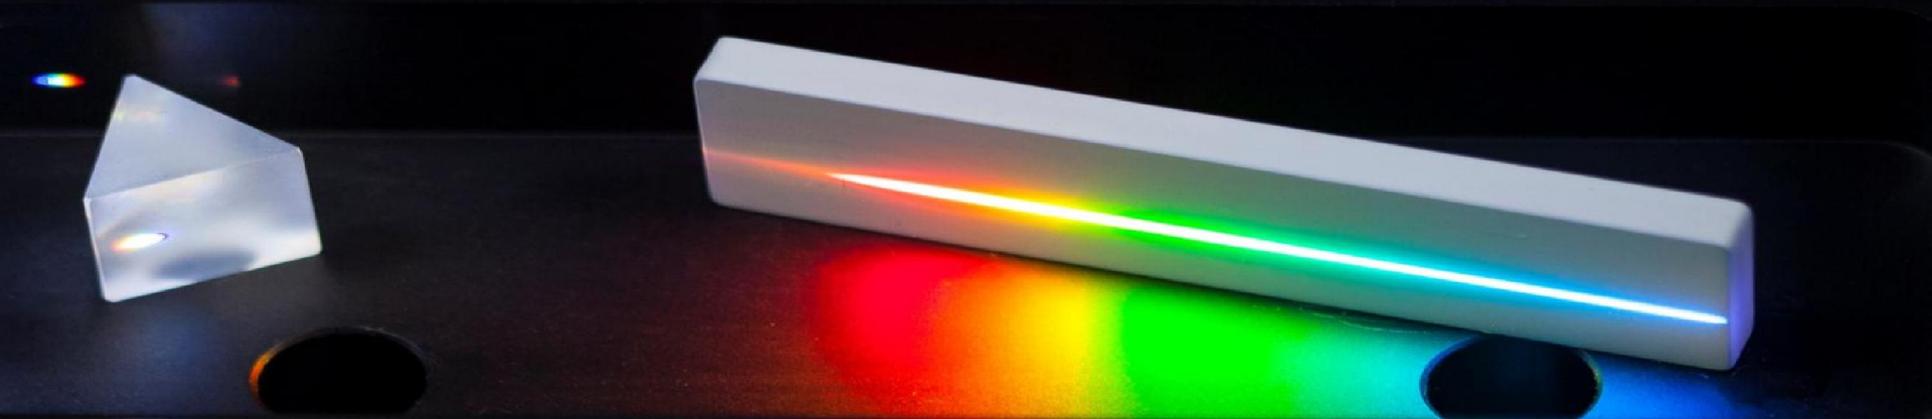

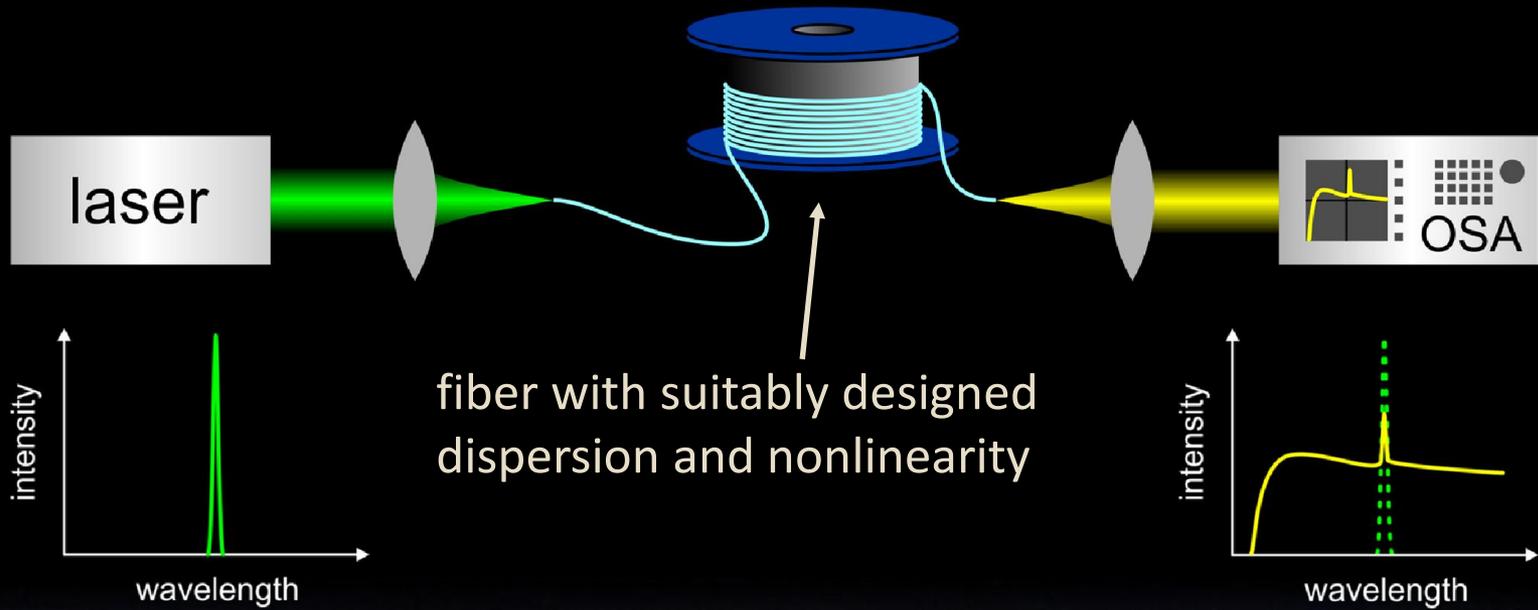

**Con:** Single line

# What is a supercontinuum source?

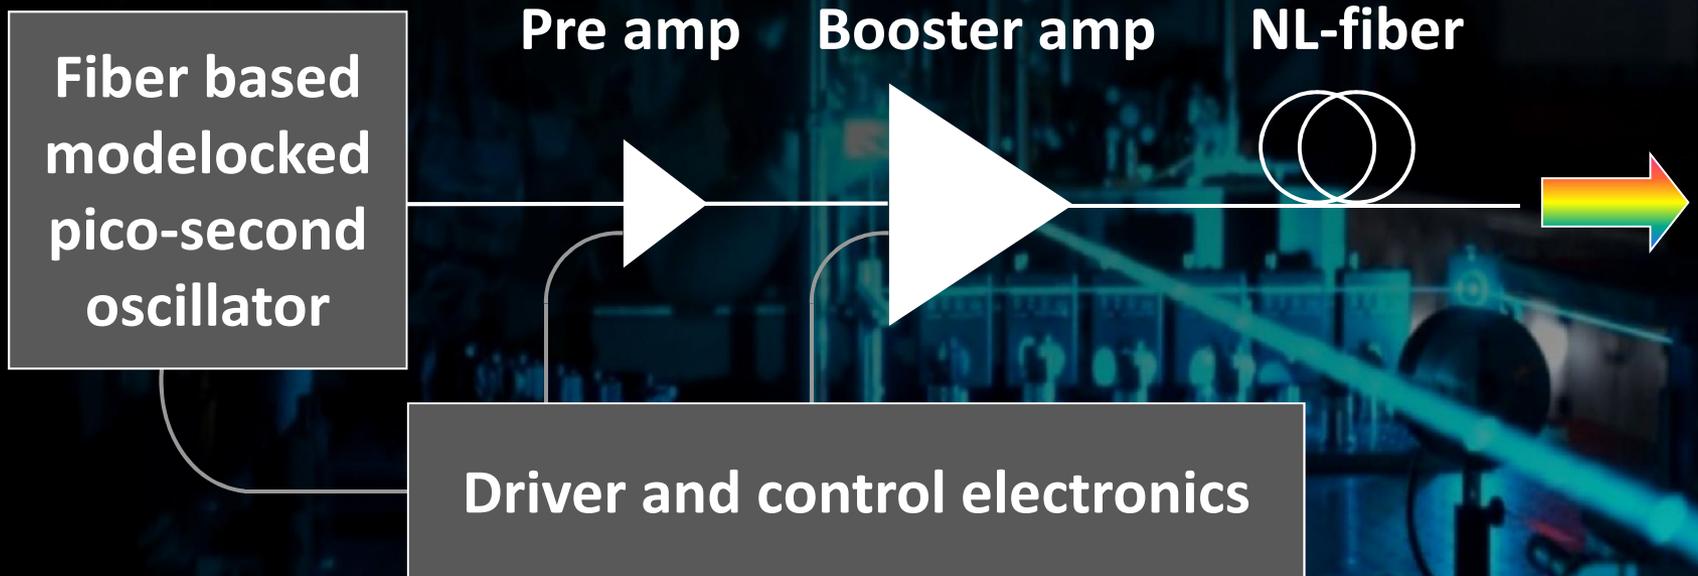

- **Bright** as a laser, **broad** as a lamp
- **Continuous** spectrum in the visible and nIR
- Continuously **tunable** over hundreds of nanometers
- **Fiber** delivered, **diffraction limited** output
- **Stable** and very **reliable** all-fiber system with zero maintenance

# Supercontinuum generation

# SuperK Series

# Modular system architecture

## top layer

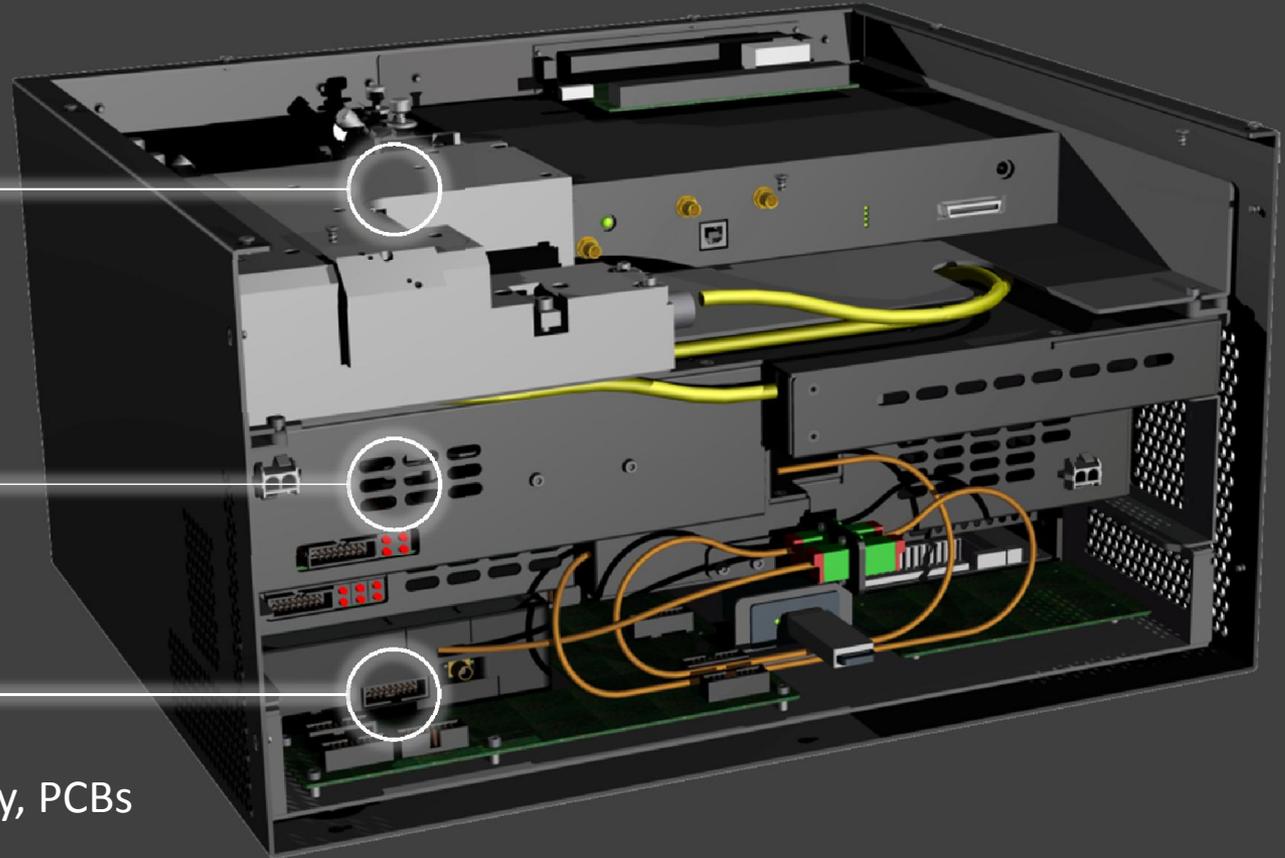

OEM specific  
(e.g. SELECT and  
integrated RF Driver)

## middle layer

booster-amp module  
with spliced PCF  
(SCG and guide fiber)

## ground layer

seeder and pre-amp  
modules, power supply, PCBs

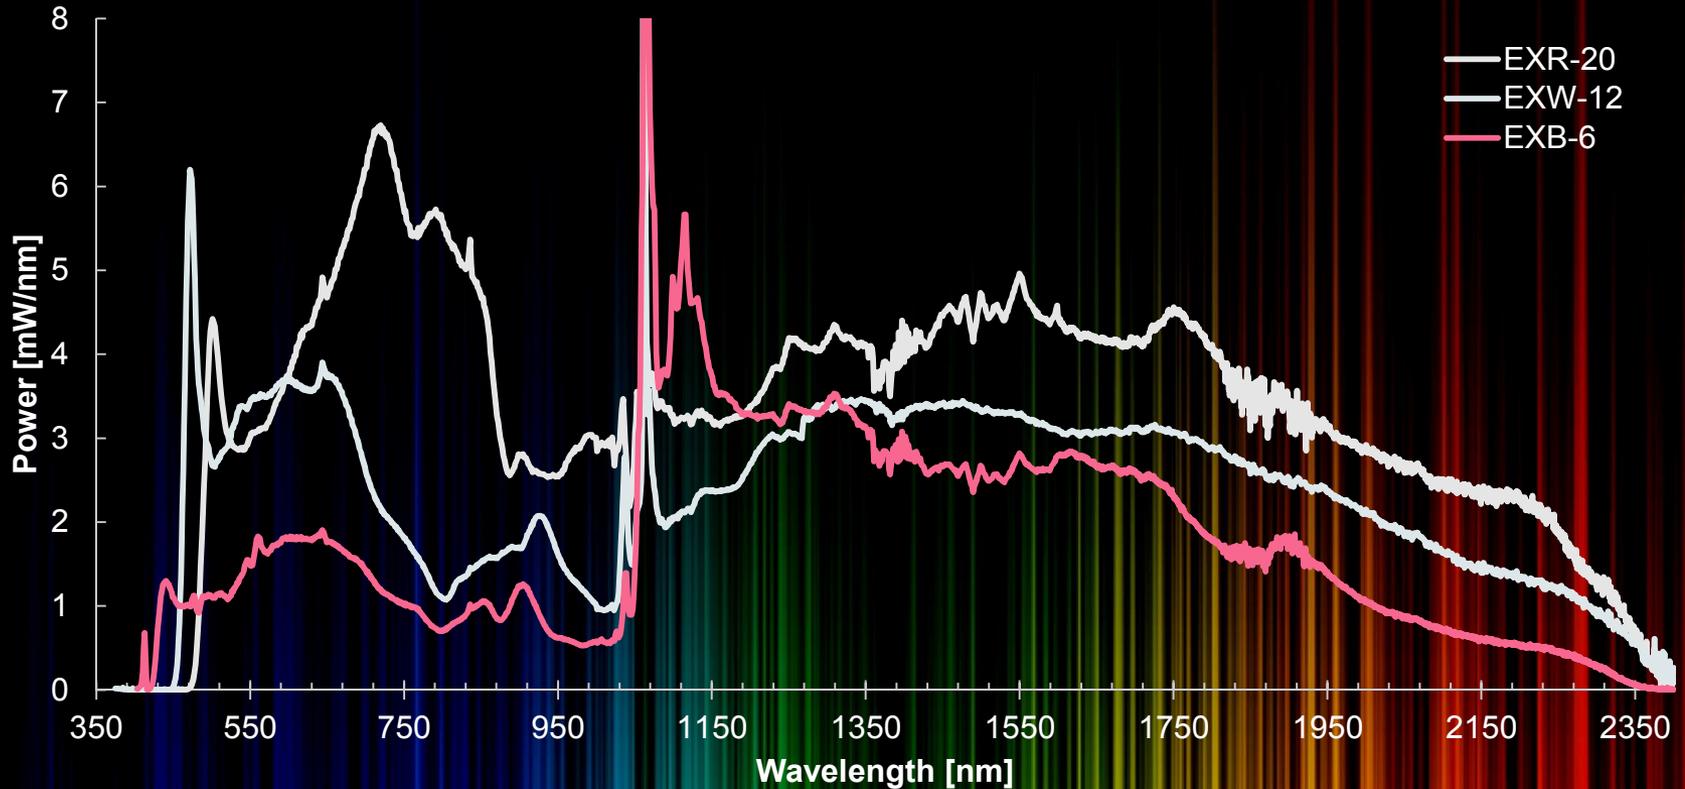

# All purpose lab tool

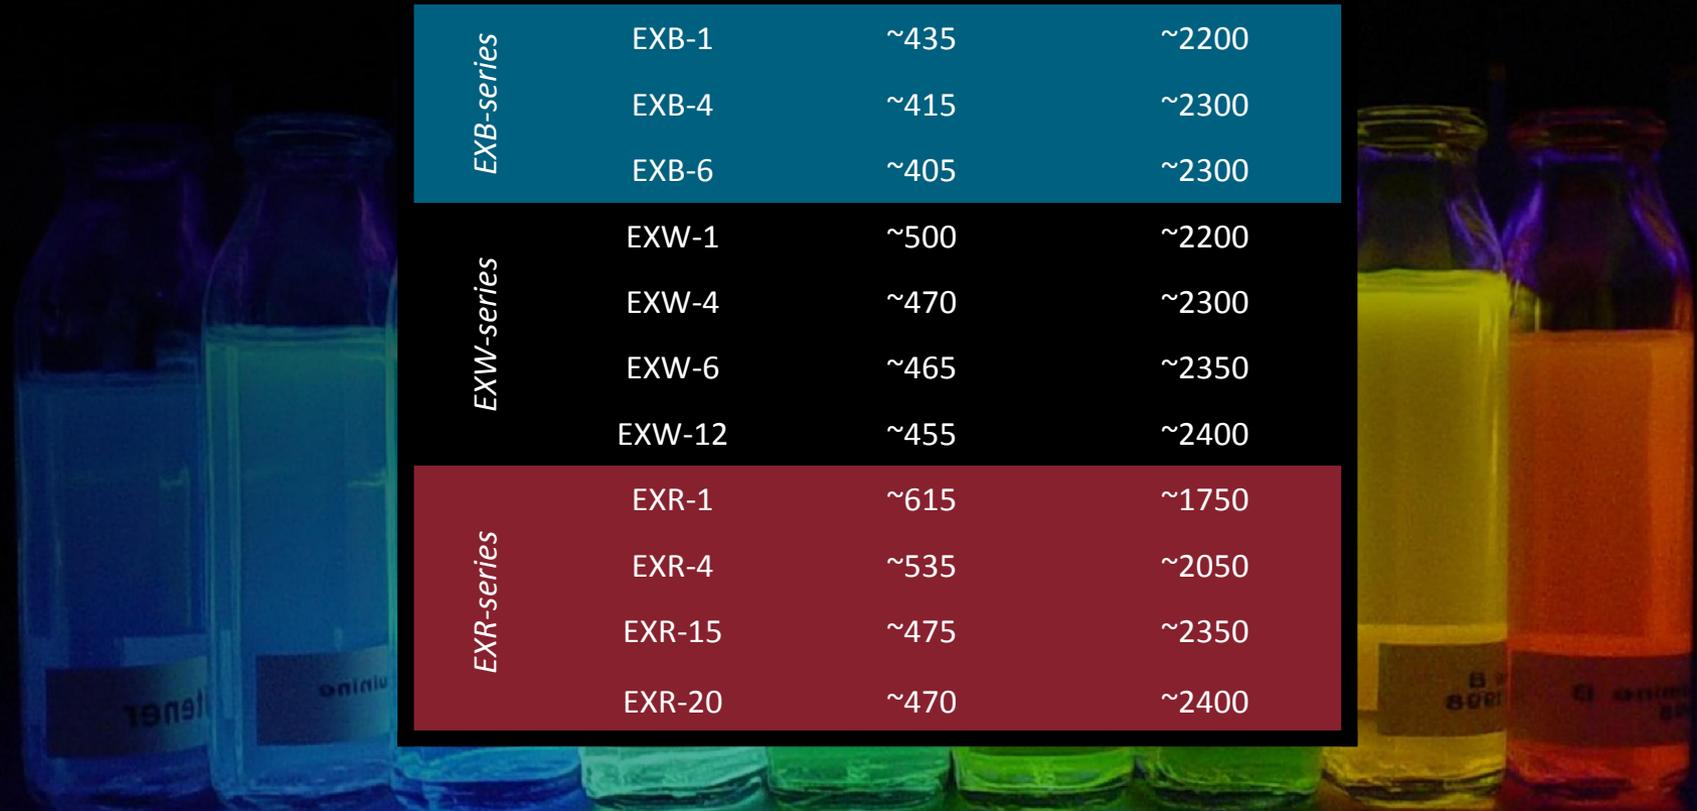

- Plug & play fiber delivery, splitters and filters
- Replaces multiple single-line and broadband sources

# SuperK EXTREME – wavelength range

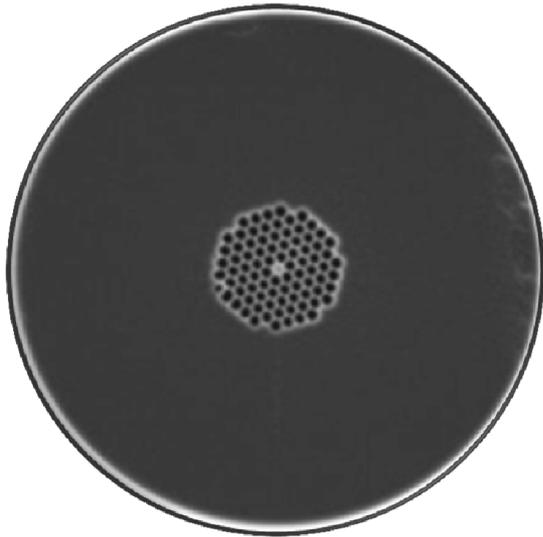

# SuperK EXTREME – cut-in wavelengths

	<i>Model</i>	<i>Min. [nm]</i>	<i>Max. [nm]</i>
<i>EXB-series</i>	EXB-1	~435	~2200
	EXB-4	~415	~2300
	EXB-6	~405	~2300
<i>EXW-series</i>	EXW-1	~500	~2200
	EXW-4	~470	~2300
	EXW-6	~465	~2350
	EXW-12	~455	~2400
<i>EXR-series</i>	EXR-1	~615	~1750
	EXR-4	~535	~2050
	EXR-15	~475	~2350
	EXR-20	~470	~2400

# SuperK termination

**NKT photonic crystal fiber is the key technology enabling**

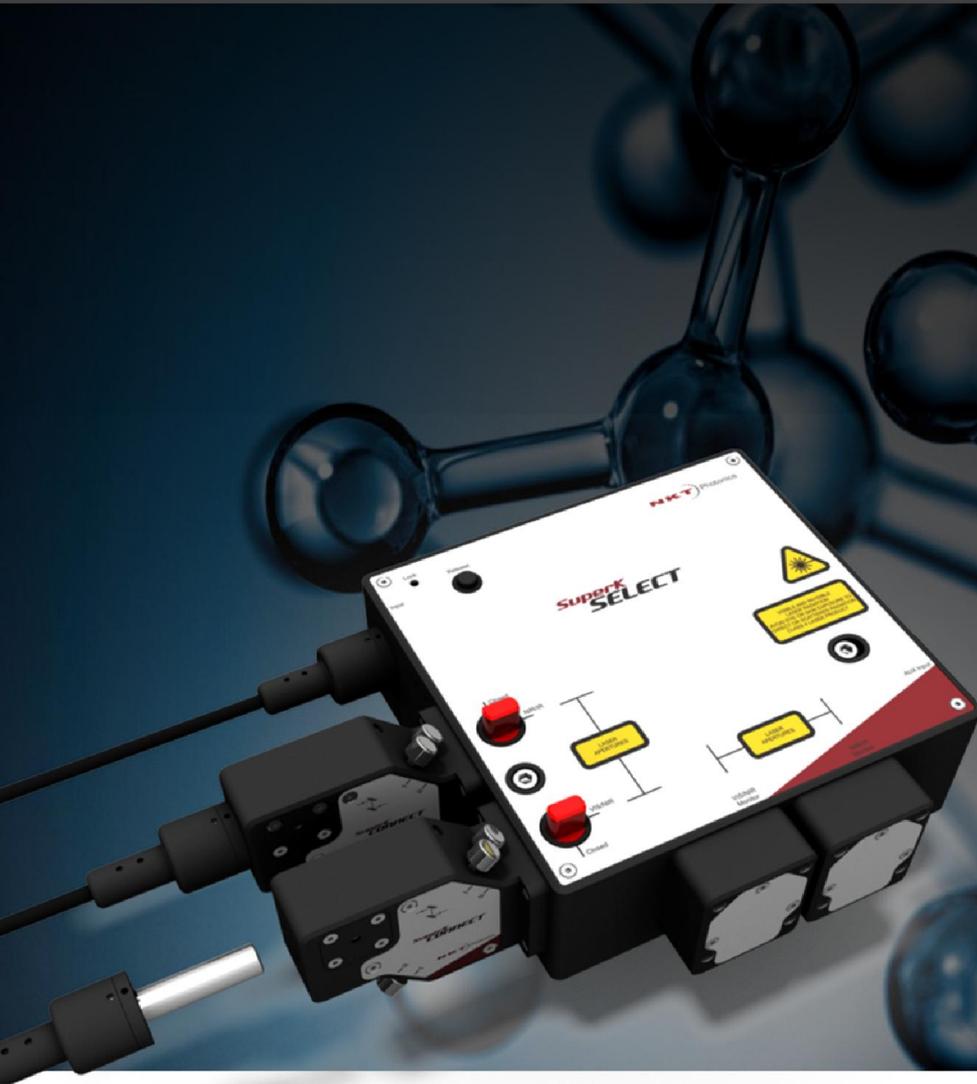

- high brightness SC generation
- efficiency
- reliability, therefore low TCO

**Proprietary collimator**

- diffraction limited
- achromatic
- highest pointing accuracy
- true single mode
- fiber coupling >70%

# Tunable like no other source

Choose between:

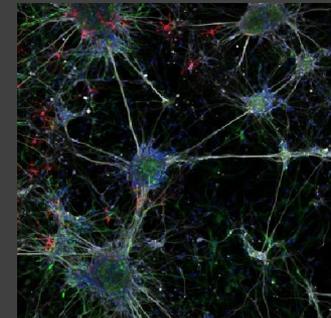

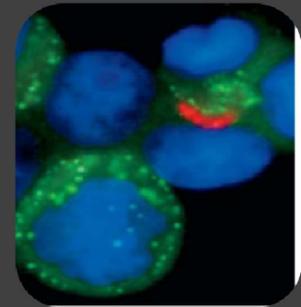

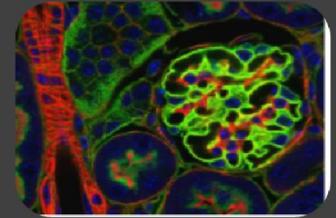

- Full broadband output
- Up to 8 tunable channels simultaneously
- Single line variable bandwidth tunable channel

# Scientific applications

- OCT
- FLUORESCENCE MICROSCOPY
- FLIM / FRET MICROSCOPY, TCSPC
- TRANSIENT SPECTROMETER
- FLOW CYTOMETRY
- SURFACE PLASMON / METAMATERIAL RESEARCH
- BRAGG GRATING / FIBER CHARACTERIZATION
- COMBUSTION MONITORING / FLAME DIAGNOSTICS
- all purpose lab light source
