

## **On the way to Europe or how to get European funding**

This workshop will provide the latest information on the upcoming EU calls in the field of photonics, as well as alternative European funding programs.

Participants will then discuss in four thematic workshops possible project ideas and project consortia with Swiss participation. Goal is to work out possible strategies and measures to participate from Switzerland either successfully in the coming calls under FP7 or to formulate projects as part of EUROSTAR, a program particularly geared to SME. The specialists of EURESEARCH and BBT can provide useful tips and hints to increase the chances of possible project proposals.

On topic information for each workshop is available in advance via the links listed below. For more information mail to <mailto:info@swisslaser.net>.

To facilitate active work, we try to establish a LAN access for all participants of the workshop.
