

SUPSI

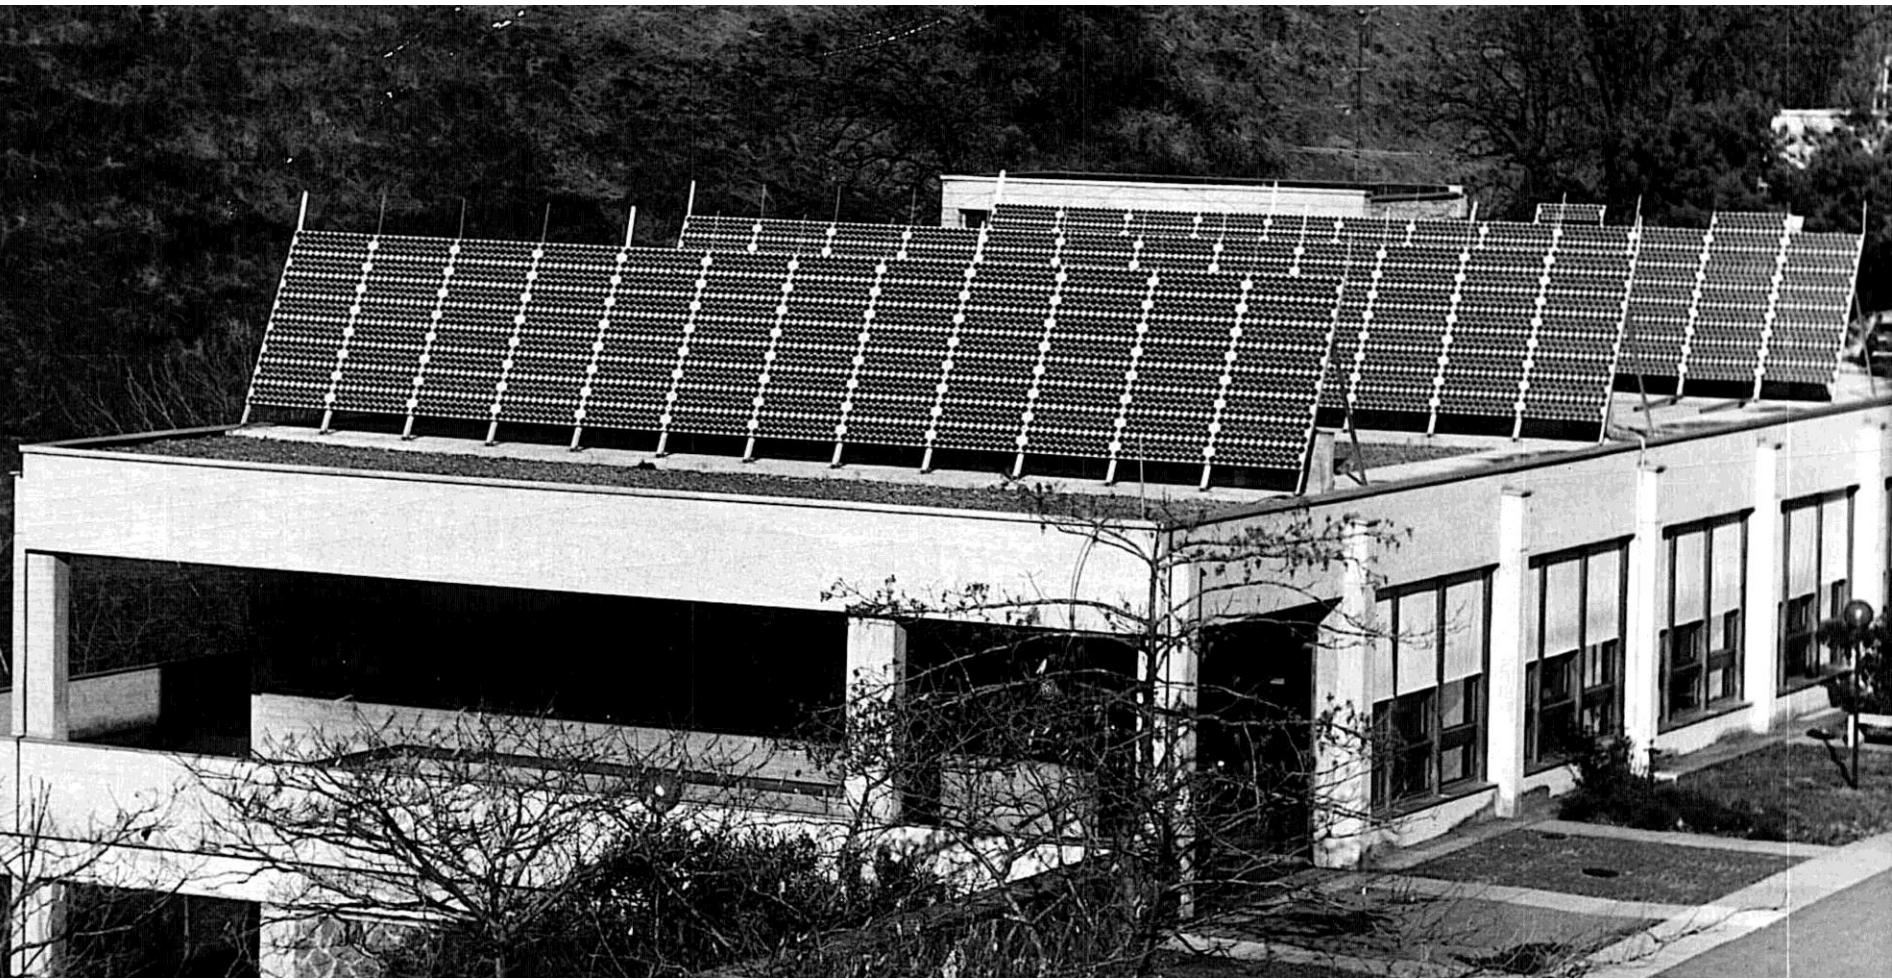

Welcome to the Swiss Photonics Workshop on

Lifetime and Reliability Issues in PV

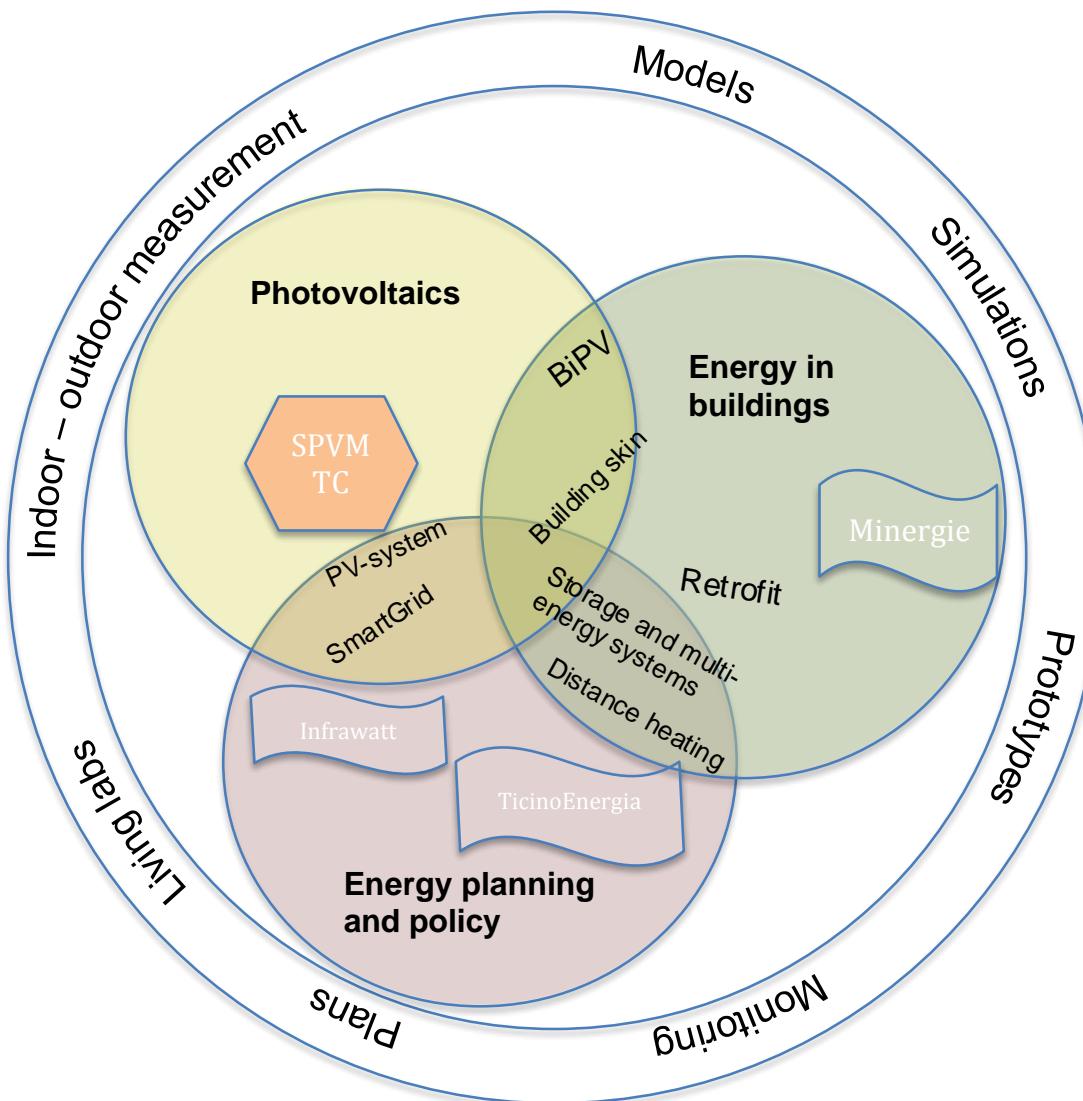

Lugano/Lamone, 10th September 2015

Roman Rudel - Head of ISAAC

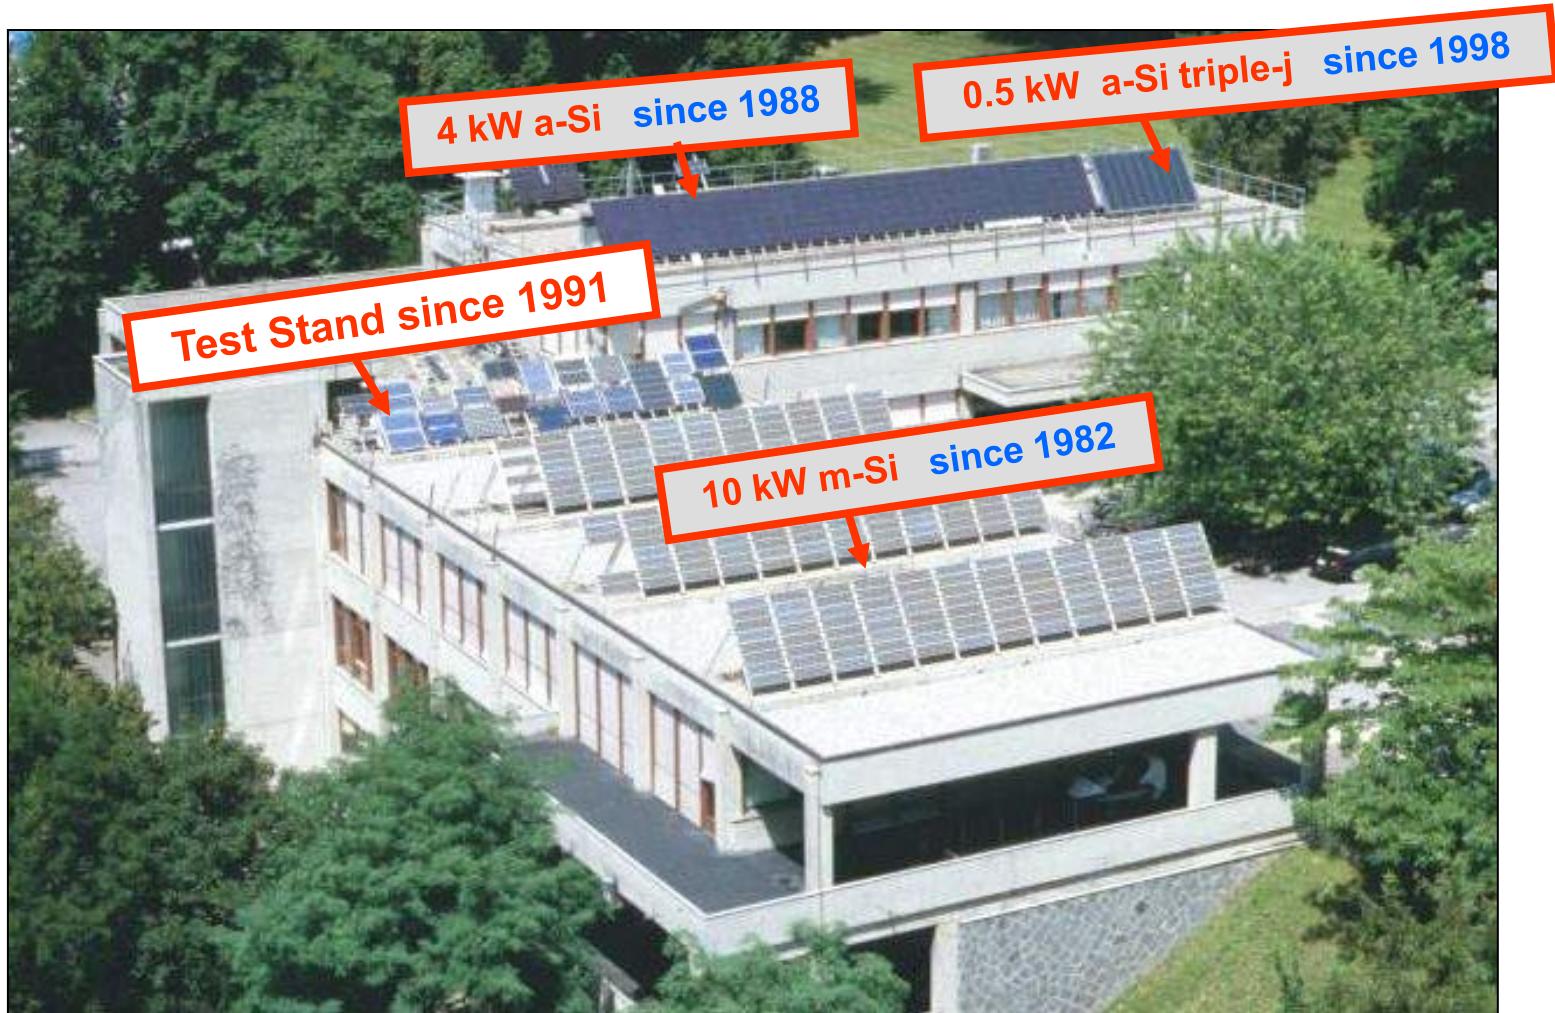

33 years of TISO – Ticino Solare

Institute of Applied Sustainability to the built environment

PV plants on the SUPSI roof

Milestones in the history of the institute

1982: TI-SO 10kW m-Si

1988: 4 kW a-Si

1991: Outdoor Test Stand

2001: Indoor Test
(ISO 17025)

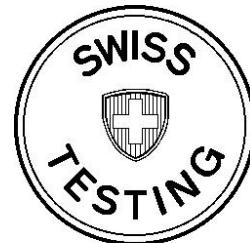

2010: PV – Module Test Center
(ISO 17025)

PV - Test laboratory

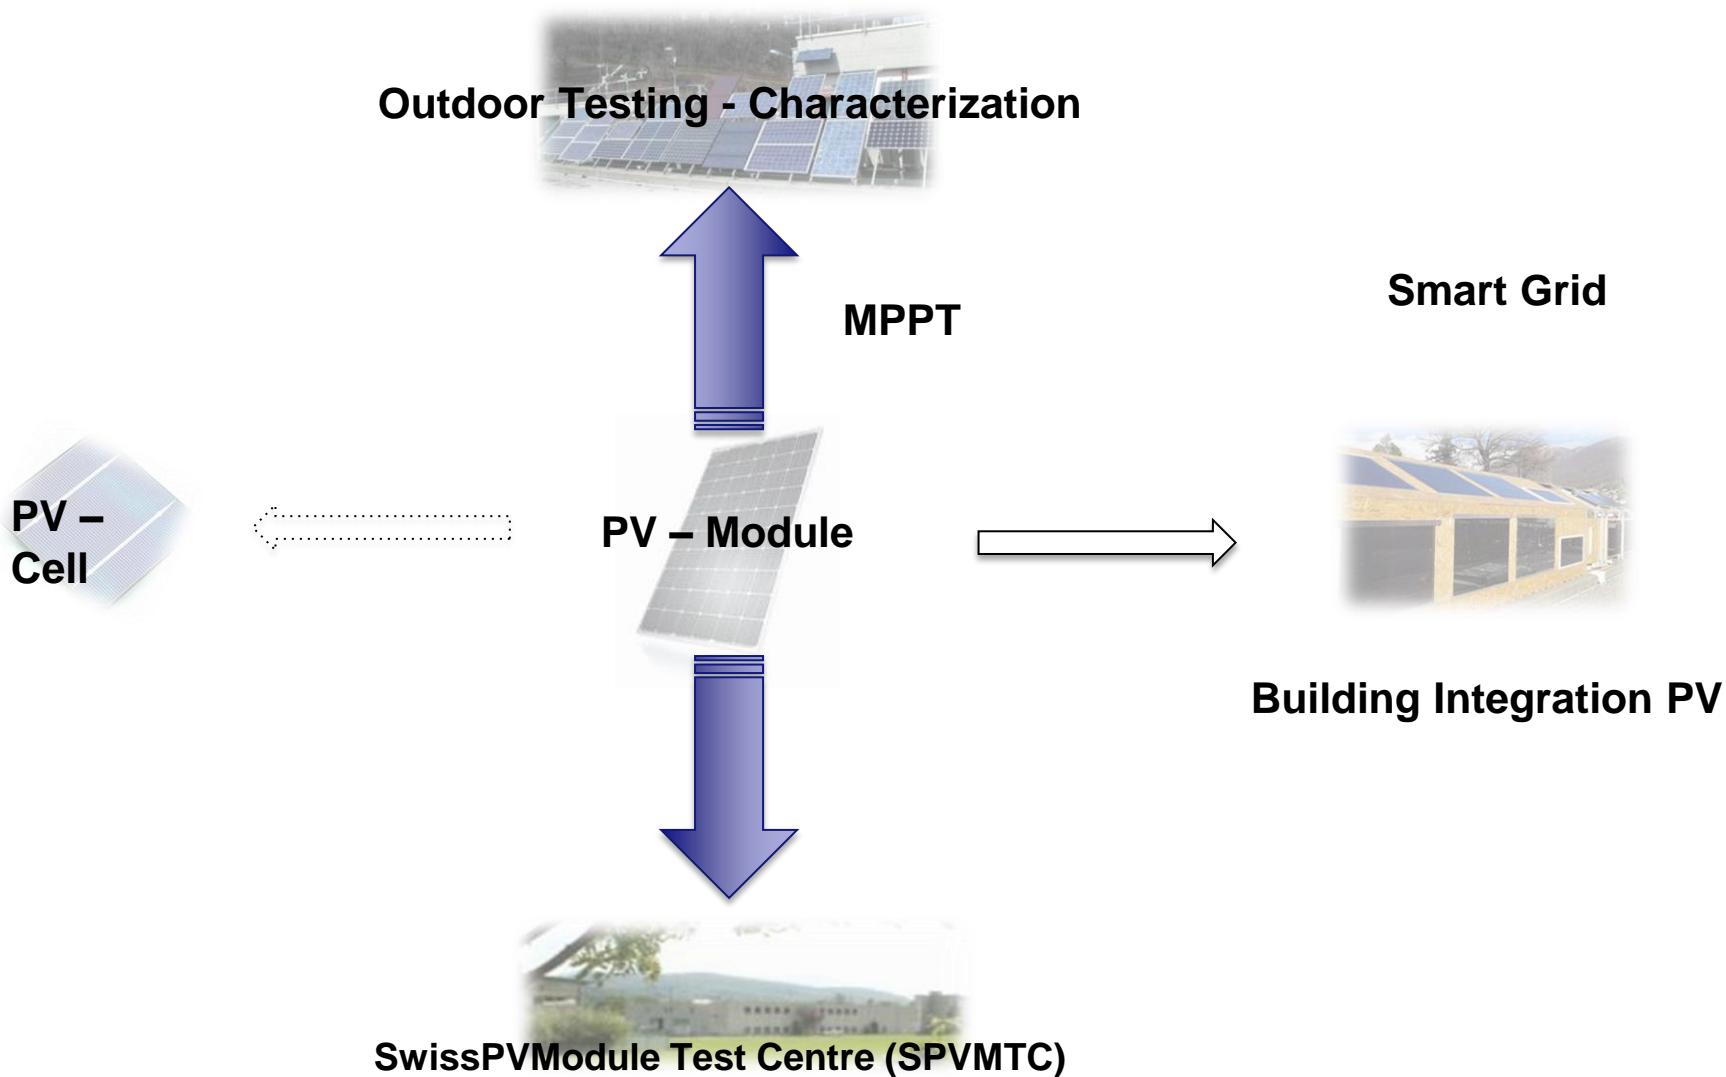

Standard IEC/ISO: 61215
 61646
 61730

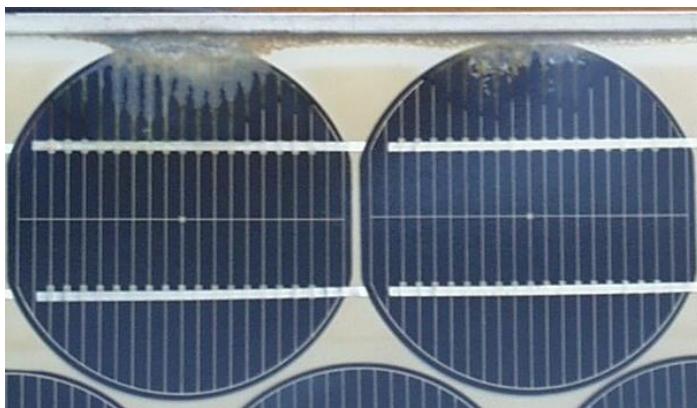

STS 531

ISAAC's PV activities and strategy

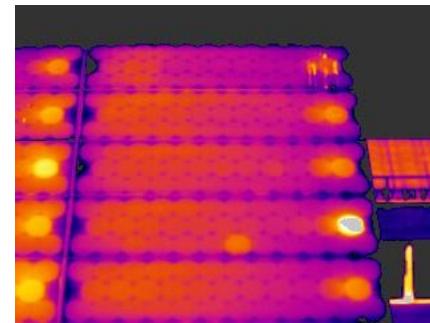

2000-2002: European Project Mean Time Before Failure: Detailed degradation analysis of the TISO 10kW plant

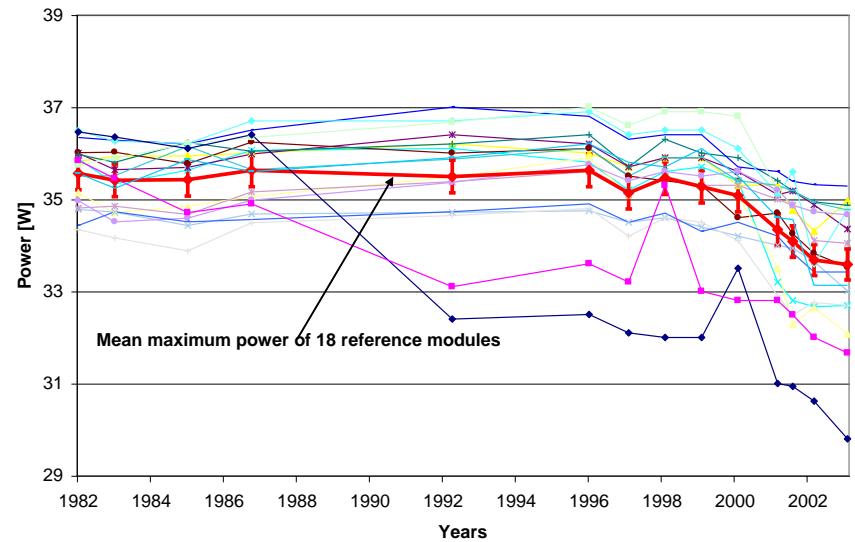

Infiltration of humidity

Detachment of first
Tedlar layer on the
backside

Hot-spot on different modules

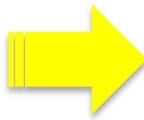

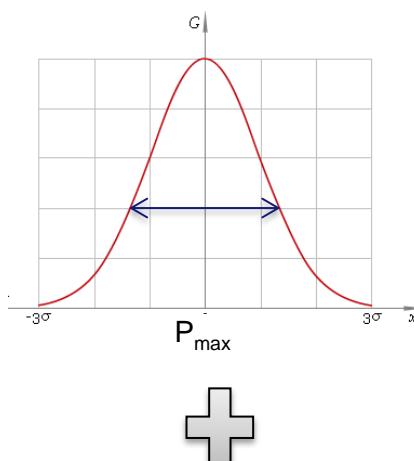

Evolution of the power of 18 reference modules

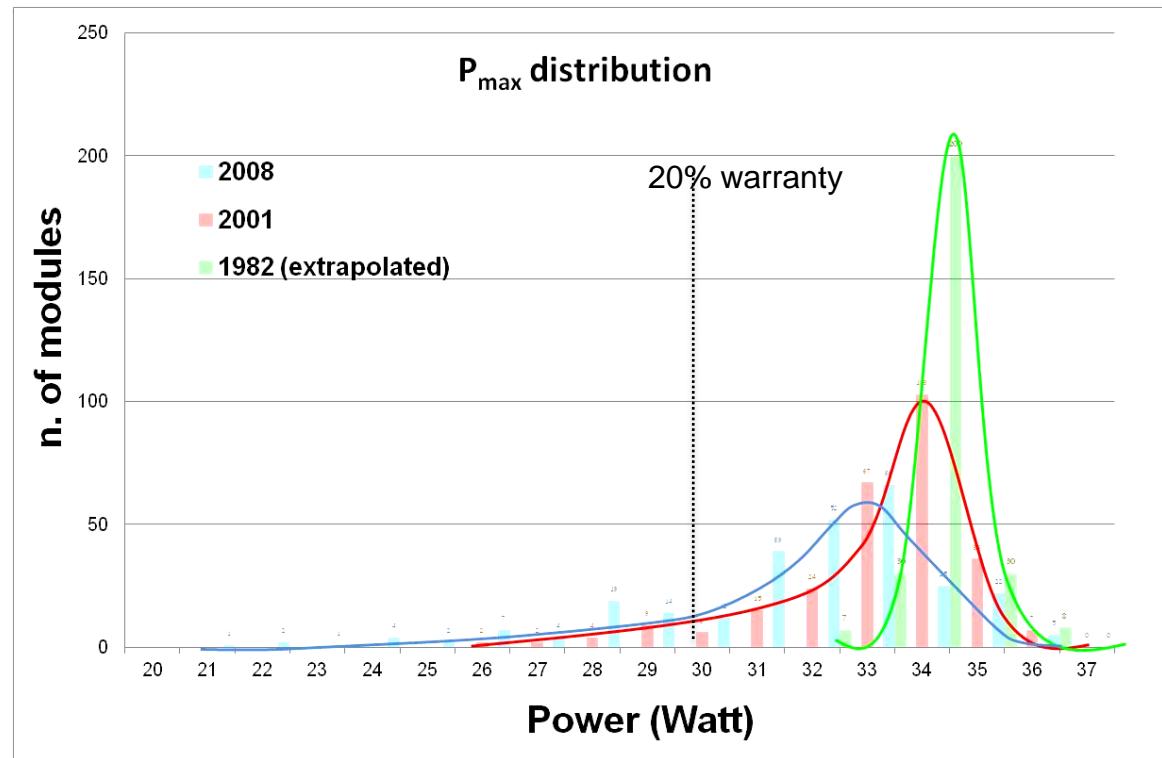

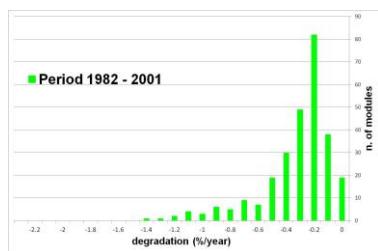

P_{\max} distribution of TISO modules in 1982 – 2001 - 2008

Initial Gaussian distribution of P_{\max}

Distribution of module degradation

The Gaussian distribution of the initial power and the different degradation rate of the single modules cause the **broadening** and **shift of the distribution** with time

Planet Solar: Reliability under special conditions

Thanks for participation
